1. Introduction

The automatic Migration Tool enables the transition from CCH Tagetik Collaborative Office to Intelligent Disclosure. This tool, in addition to safeguarding the integrity of existing documents, makes the following new Intelligent Disclosure features available:

- Advanced collaboration: allows multiple users to access and edit documents simultaneously with real-time updates, promoting smoother teamwork.
- Simplified user experience: the intuitive and modern interface facilitates document editing and settings management, reducing the learning curve and increasing productivity.
- Version control: automatic version creation eliminates the need for manual interventions and ensures easy access to previous document versions.
- Centralized installation of add-ons: the installation and updating of add-ons are managed through centralized distribution in the Microsoft 365 console, eliminating manual activities for users.
- Data integration: allows users to retrieve data from various CCH Tagetik databases and external sources within a single document and create comprehensive and integrated reports.
- Advanced sharing, commenting, and tagging: ensures advanced user interaction that improves communication and collaboration.

2. Report of migrated features

2.1 Automatically migrated features

Below is the list of features migrated to CCH Tagetik Intelligent Disclosure.

Collaborative Office	Intelligent Disclosure
Master Document	Parent Document
Part Documents	Part Documents
Document Metadata	Original document metadata. For example: Document language, Default parameters (Account, Scenario, Period), Numeric values, Percentage values, Date values
Matrix as Table	Table from CCH Tagetik Form
Matrix as Image	Table from CCH Tagetik Form as Image
Chart from Matrix as Image	Chart from CCH Tagetik Form
Amount	Amount from CCH Tagetik
Cell Field	Dimension Attribute
Formatted Text	Free Text
Rich Text	Rich Text
Area as Table from Excel Attachment	Table from CCH Tagetik Excel
Area as Image from Excel Attachment	Table as Image from CCH Tagetik
Chart as Image	Chart as Image from CCH Tagetik Excel
Cell from Excel Attachment	Cell from Microsoft Excel
Bookmark Object	Component Object

Referenced Object	Instantiated Object
Object Inserted in Header or Footer	After migration, objects do not change position and can be easily edited
Link to iXBRL	After migration, the document retains the previously inserted tags

2.2 Non automatically migrated features

Below is the list of features present in Collaborative Office but not automatically migrated in Intelligent Disclosure and the related possible recovery options.

Collaborative Office	Intelligent Disclosure	Recovery option
Start and end filter	Filters can be defined at the document part level.	It is possible to define the size value set in the Start Filter object as a parameter of the document part. In this way, all items in the document part can inherit this value. See Add a part to the document.
Reference document for attachment use	The attachment can be linked to the object by searching directly on SharePoint and can be shared among all documents.	Attachments are stored in the SharePoint site dedicated to the application and are accessible by all documents on the site.
Style template	The styles will be maintained and the template will be available among the Word styles for use.	It is possible to upload the previously saved template or recovered from the zip file and upload it from CPM in order to reapply it to the document during Roll Forward.
Non-part document	The concept of non-part document is no longer available in the new solution.	Restore option not currently managed.
Possibility to link the Workflow to the Process	Functionality not supported.	Restore option not currently managed.
User rights	User rights must be created manually in the new solution.	It is possible to restore the management of user rights from the User Rights section. See User Rights.
Workflow	Workflows must be created manually in the new solution.	It is possible to restore the management of Workflows by consulting the Workflow section.
Archived documents	Documents must be unarchived to be exported to the new solution.	Files can be moved and organized in folders in SharePoint. A folder

		dedicated to archived documents can be created.
Border mapping	The borders remain mapped even after migration.	Borders can be applied directly in the Word document as a manual style change.
Table size	After migration the table does not undergo size changes.	Table sizes can be applied directly in the Word document as a manual style change.
Snapshot	Past document snapshots will not be migrated, snapshots are no longer required in the new solution thanks to the availability of the automatic version.	Restore option not currently managed.
Free Table & Object from another file	The content in the document will be available but objects will not be displayed as CCH Tagetik objects.	Restore option not currently managed, non-Tagetik content can remain in the document as Word objects.
Custom formatting on a single cell of a table	Any custom formatting applied to a single cell of a table will not be considered at the next update in the new solution.	It is possible to restore the management of Formattings See Format section.
Parameterizer option in document settings	Not available in the new solution	Restore option not currently managed

2.3 Not Supported features

Below is the list of features not yet available in Intelligent Disclosure, all of them are already present in the product roadmap and will be available soon:

Collaborative Office	Intelligent Disclosure
Validation rules	At the moment there isn't the possibility to have data validation with definition of custom rules.
Free Text type reference objects	Intelligent Disclosure supports component for objects with a source (either Excel or CCH Tagetik), but it does not support component for text objects
Advanced workflow features	The following workflow features are not supported: - multi-approval: only one approval level is allowed - edit certified data: a reject of the document part is required before editing the data - generic task - send remainder emails
Dedicated reports	the report to check differences with the source is not yet available

Propagate header and footer	Intelligent Disclosure does not support custom logic to define how header and footer should be propagated in the different levels.
Update scheduling:	object updates can be done only when a user is logged in the Word addin.

3. How to migrate documents from Collaborative Office to Intelligent Disclosure

3.1 Requirements

To start the migration process from Collaborative Office to Intelligent Disclosure, the following conditions are necessary:

- Access to Collaborative Office and Intelligent Disclosure systems
- CCH Tagetik role to export and import documents
- Document structure and contained objects must be updated

3.2 Migration Procedure

3.2.1 Exporting documents from Collaborative Office

Go to: database application > Folder > Master document > Export (Ribbon) > to intelligent disclosure > select the Export Folder > OK

This procedure allows you to export a document and its contents:

- Access Collaborative Office
- Click on the application DB to export
- Click to expand the folder with the documents
- Select Master document (not archived) visible in the structure
- Select Export
- Click on the Intelligent disclosure option
- Choose the local path where to save the exported file with .zip extension

Note: Any archived documents must be restored before proceeding with the export.
Note: Only one Master Document can be exported at a time.

IMPORTANT: Before proceeding with the export, verify that the following characters are not present in the descriptions of Document Parts \, /, ;, *, ?, ", , |. If present, the import system will automatically replace the characters with space.

3.2.2 Importing documents into Intelligent Disclosure

Go to: Import (ribbon) > Sharepoint folder > exported .zip file > Import

IMPORTANT: Before accessing CCH Tagetik Intelligent disclosure, upload the exported .zip file from Collaborative Office to the dedicated Sharepoint space related to the tenant.

This procedure allows you to import a document and its contents.

- Access Intelligent Disclosure
- Navigate to the Document Import Tools section from the ribbon
- Select the file with .zip extension located in the previously uploaded Sharepoint folder
- Select the destination folder where the imported document will be saved
- Select import
- Verify the loaded documents are visible from the Library Panel
- Open the document and check that all document parts, attachments, and objects contained are imported and displayed correctly.

IMPORTANT: Once the documents are migrated, they can no longer be produced using Report Bursting.

For unsupported features in Intelligent Disclosure, consider alternative workflows that can provide similar functionality. While some features may not be transferred, the new system offers advanced features that will enhance document management experience.
