What's new in CCH® Tagetik 5.3 Service Pack 35

The AI-powered CCH® Tagetik Intelligent Platform enables finance professionals to democratize access to meaningful financial data, manage and control massive datasets with unprecedented speed and automation, unlock hidden insights, and expedite decision-making. CCH Tagetik 5.3 Service Pack 35 introduces a range of new features designed to enhance the platform and its components. These updates offer greater automation, flexibility, and accuracy, simplifying daily tasks, and allowing more time for value-added analysis.

Intelligent Platform

Deep Learning Model for Anomaly, Forecast, and Analysis

For finance and performance management teams who need to analyze and forecast very large datasets - where rows × accounts/dimensions and multiple KPIs make traditional ML models slow or requires pre-processing of data - Deep Learning Model for Anomaly, Forecast, and Analysis provides a single engine that simultaneously supports predictive forecasting, driver-based analysis, and anomaly detection in one unified workflow.

The model performs multi-target training, learning patterns across multiple KPIs and drivers at once, even with uneven or incomplete historical series. It scales automatically to high volumes, supports incremental updates for frequent reforecasting, and eliminates the complexity of managing multiple models or algorithms. It maintains consistent, aligned insights across all analyses and serves as the foundation for next-generation agentic AI on the Tagetik platform.

In summary: one powerful, scalable, and easy-to-use AI model for complex, high-volume, multi-dimensional scenarios where traditional ML struggles — now enhanced with multi-target capabilities.

We designed the Deep Learning Model to address these needs with a unified, scalable, and easy-to-use approach:

1. Multi-target learning with uneven historical series: The model handles multiple KPIs and multiple variables simultaneously, even when historical have:

- different lengths
- different granularities
- misaligned seasonality

The neural network learns from correlations across heterogeneous drivers and targets, drastically reducing pre-processing and enabling the use of imperfect datasets.

Wolters Kluwer

2. One neural network for three use cases: A single model performs:

- Forecasting
- anomaly detection
- driver-based analysis

without separate pipelines. It is trained once and serves all financial processes.

3. Effective learning even with limited history: The model identifies relevant patterns even from short or misaligned series between targets and drivers, providing maximum flexibility where historical data is not long or aligned enough.

4. Scalability for high-dimensional datasets: It manages large rows × accounts/dimensions combinations, multiple drivers and KPIs, and long histories, maintaining speed in both training and inference.

5. Incremental training for continuous updates: It enables rapid updates without restarting full training - ideal for hourly, daily or weekly forecasts.

New Connector for Microsoft Fabric

A new native connector for Microsoft Fabric has been introduced in Service Pack 35, enabling seamless integration between CCH Tagetik and the Microsoft Fabric. This enhancement allows users to directly connect to Microsoft Fabric to ingest datasets into CCH Tagetik, supporting both scheduled and on-demand data flows. The connector is optimized for enterprise-scale data volumes and is designed to streamline operations for customers already leveraging Microsoft ecosystem. Finally, Client/Secret authentication is supported for the connector.

Intelligent Analytics

Display Options for Pivot Elements

Users can now choose what to show as row or column headers in a CCH Tagetik Pivot table. For each element in rows or columns, users can choose one of the following display options in the settings panel:

- Code: Show only the element's code;
- Description: Show only the element's description;
- Code and Description – Show both values concatenated;

The default option is "Description".

Process and Workflow - Process Hub

Step Grouping

Long process flows are now easier to read and navigate. With Step Grouping, conceptually similar sequential steps can be organized together, resulting in a cleaner visual layout, a more compact UI, and far less scrolling — especially in complex processes.

Absolute Values in the Performance Dashboard

Users can now switch between percentage and absolute values in the dashboard histogram and instantly view the exact number of items in each status (not started, in progress, submitted, rejected, pending approval) for better, more actionable insights.

Open First In-Progress Step

When opening a process, the system now automatically focuses on the first step currently In Progress, instead of simply loading the very first step. Less clicking, less searching — more efficiency.

Task Management - Thread based integration within Process Hub

Users can now open a dedicated comment thread for each task directly from the list view within the Process Hub, making teamwork faster, clearer, and more contextual. With this enhancement, users can:

- Create and edit comments effortlessly.
- Reply to colleagues and keep discussions neatly organized in threads.
- Mention teammates to bring the right people into the conversation instantly.
- Attach files to comments for richer, more complete context.

Advanced Filtering of Dimension Tree

With Advanced Filtering, users can now navigate even the most complex hierarchical structures with ease — across any organizational dimension. This enhancement introduces:

- Smarter hierarchical filtering that applies the selected filter not only to the main elements but also to their related attributes.
- Full support for all organizational dimensions — Entity, Custom, and Analytical — delivering consistent behavior across the board.
- The ability to save personalized filter presets, allowing each user to reload their preferred configuration instantly, whenever needed.

Task Management - Thread based integration within Process Cockpit

You can now open a dedicated comment thread for each task directly from the list view within the Process Hub, making teamwork faster, clearer, and more contextual. With this enhancement, users can:

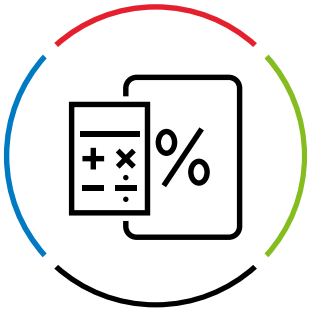

- Create and edit comments effortlessly.
- Reply to colleagues and keep discussions neatly organized in threads.
- Mention teammates to bring the right people into the conversation instantly.
- Attach files to comments for richer, more complete context.

Advanced Filtering of Dimension Tree

With Advanced Filtering, users can now navigate even the most complex hierarchical structures with ease — across any organizational dimension. This enhancement introduces:

- Smarter hierarchical filtering that applies the selected filter not only to the main elements but also to their related attributes.
- Full support for all organizational dimensions — Entity, Custom, and Analytical — delivering consistent behavior across the board.
- The ability to save personalized filter presets, allowing each user to reload their preferred configuration instantly, whenever needed.

Intelligent Solutions

CCH Tagetik Financial Close & Consolidation

Consolidation of Investment (CoI) Report

The consolidation of financial investments and net equity accounts is one of the most critical and complex steps in any statutory consolidation cycle. Introduced in Service Pack 34, the Consolidation of Investment (CoI) Report provides consolidators, sub-consolidators, and auditors with a comprehensive tool to track and monitor all information related to investment consolidation — from input data to elimination journals.
The report is accessible from the Process Hub Cockpit via the Reports button and has been further enhanced in Service Pack 35. Key improvements include:

Contribution tab

This new tab displays the evolution of data split by category for financial investment and net equity accounts. The table first shows the impact of entity categories (Amounts and Entity Journals), followed by the impact of Consolidation Journals.

Consolidation Journals tab

This tab has been enriched. In addition to the financial investment elimination journal, the report now includes:

- Minority interest journals
- Net equity reclassification journals
- Equity evaluation journals

Owner Entities tab

Enhanced with additional information for improved visibility and analysis.

Ownership Structure Register tab

Now includes details about exchange rates loaded for each event and/or event account, as well as net equity accounts converted into the owner's currency.

Graphical component for group structure

A visual component that displays the group structure filtered by the selected owned entity.

CCH Tagetik Intelligent Disclosure

Verification of Data with Source

A new verification capability gives users complete control over the integrity of their disclosure documents. The feature helps ensure that disclosure documents remain fully aligned with their source data in Excel or CCH Tagetik.

Wolters Kluwer

Why is it useful? This feature removes uncertainty around data integrity by clearly distinguishing between intentional manual changes and unintentional discrepancies. It supports compliance, reduces risk, and minimizes time spent on manual checks.

What can users do now?

- Instantly verify whether all data in a disclosure document matches the latest source values.
- View a detailed comparison report highlighting every difference between the document and its source data.
- Identify whether differences are intentional (e.g., approved manual edits) or require corrective action.

How does this feature work? The system scans the entire disclosure document, compares each object with its latest source value, and generates a comprehensive discrepancy report for review.

InDesign Sharing option

A new InDesign Sharing option strengthens collaboration between finance/ESG and design teams by enabling seamless, synchronized work across Word, SharePoint, CCH Tagetik, and Adobe InDesign.

Why is it useful? This capability removes manual handoffs, version confusion, and rework between teams—helping accelerate reporting cycles while maintaining data accuracy and visual consistency.

What can users do now?

- Share Word-based disclosure documents directly to Adobe InDesign via SharePoint with a single action.
- Enable parallel collaboration, where finance updates data in CCH Tagetik while designers work on layouts.
- Ensure design teams always access the latest, synchronized disclosure data.

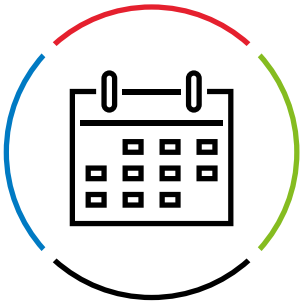

Account Reconciliation

Assignee Users' Replacement Tool

This tool enables the mass replacement of one user (Reconciler/Reviewer/Approver) with another across reconciliation responsibilities.

Admin Users can now quickly replace one user with another in each reconciliation object in which he/she was involved. Within a specific data entry form, it is now possible to select the user to be replaced and the new one.

How to access the feature: In the Assignment Rules tab, a dedicated hyperlink allows users to directly access the new report

CCH Tagetik Extended Planning

Improved Scalability of Supply Chain Planning Processes

We improved the scalability of the Supply Chain Planning (SCP) solution by introducing the ability to export and import the content of an instance. This enhancement enables several use cases, such as performing Instance Promotion Across Environments, simplifying Automated Backup by introducing the concept of Restoring the SCP Database from a Previous Data Version, or Copying the SCP Database to a Different Tenant or Database. Additionally, this capability allows the creation of Starter Kits or Pre-Packaged Solutions, making the SCP process more accessible and easier to use within the CCH Tagetik platform.

Why is it useful? This feature simplifies the management and usability of the Supply Chain Planning solution. Its behavior is now aligned with other modules in terms of Import/Export, such as in the Analytical Workspace. This alignment introduces new use cases that streamline the administrator's activities and improve operational efficiency.

What can users do now? Administrators can now export the content of an instance and re-import it into the same instance or another instance, enabling:

- Environment alignment across different setups
- Backup and restore of work specific to the SCP solution
- Partners and services to create new Starter Kits, potentially tailored by industry, to simplify systematic use of the SCP process within the CCH Tagetik platform.

How to access the feature: The feature is available through the CCH Tagetik interface on the Supply Chain Planning administrator page, via the dedicated Import/Export buttons. The functionality is managed through a simple and intuitive interface that guides users step by step.

Record Completion

The new version of the record view for Supply Chain Planning processes enhances the user experience by introducing a dedicated user interface that simplifies and optimizes data visualization. The following record types have been migrated: Map, Forecast Split, Top-Down Child, Schedule Rollup, BOM Part, and Resources. This feature allows users to view Supply Chain Planning record data in an interface fully integrated with the Tagetik user experience, streamlining day-to-day activities. It also enables intuitive navigation across the different record types.

What can users do now? The previous version of the record view did not support certain processes, such as production and logistics management. These processes are now available in the updated record view, enriched with new graphical components, including the Sales Order Table and the Firm Order Rollup Table.

How to access the feature: The feature can be enabled through the preview new UX/UI toggle. Once inside the record view via the workflow, a dedicated button allows users to switch to the new version.

ESG & Sustainability Performance Management

Intercompany Eliminations

Disclosure of intercompany elimination enhances transparency in the ESG Metrics & KPIs – CSRD module.
Users can now view intercompany eliminations that occur during consolidation. Previously, only unconsolidated and consolidated data were available, with no visibility into the eliminations performed by pre-configured operations.
How does this feature work? Data Entry and General Output reports now include a dedicated view that allows users to define, review and navigate intercompany eliminations.
How to access the feature: This functionality is available within the ESG Metrics & KPIs and CSRD modules.

MDR quantitative non-detailed KPIs multi-purpose deployment

Uses can now automatically deploy the creation of MDR quantitative KPIs And leverage MDR quantitative detailed content of “General Disclosure” purpose to replicate in other CSRD disclosed purposes automatically, avoiding manual creation of ad-hoc custom KPIs for this scope.
How does this feature work? Automatism following the results of materiality assessment of ESRS is going to include quantitative (with details) KPIs from "General Purpose" to other purposes, replicating its content from “General Disclosure” purpose to the others disclosed and material purposes in scope.
How to access the feature: This functionality is available within the CSRD module.

Dedicated process for CSRD Omnibus disclosure

This feature enables users to produce a compliant disclosure based on last regulatory CSRD KPIs updates. Users can now produce and disclose an up-to-date regulatory content compliant with the latest available European Sustainability Reporting Standards based on the CSRD “Omnibus” package.
How does this feature work? Users can leverage a dedicated end-to-end process and content containing the latest available CSRD KPIs and needed disclosure post “Omnibus” package allowing to define indicators to be reported, inserting due data in dedicated and already available structures and to produce its relevant output to be disclosed. A dedicated mapping is present to join previous regulatory content to currently available CSRD Omnibus indicators allowing information continuity amongst modules.
How to access the feature: This functionality is available the CSRD module.

Carbon Emissions: Consolidation and Intercompany Eliminations

Disclosure of intercompany eliminations enhances transparency in emissions calculations and supports audit-ready reporting.
What can users do now?
Users can now view intercompany eliminations that occur during consolidation. Previously, only unconsolidated and consolidated data were available, with no visibility into the eliminations performed by pre-

configured operations.

How does this feature work? The General Output report now includes a dedicated view that allows users to review and navigate intercompany eliminations.

How to access the feature: This functionality is available within the Carbon Emissions module

Carbon Emissions: New Emission factors Databases available, ISPRA and AIB

These features enlarge the content of the emission factors provided by the solution and reduce the custom integration efforts on project side.
Users now have access to the following new emission factor databases:

- ISPRA – Apply official emission factors published by the Italian National Institute for Environmental Protection and Research for stationary and mobile combustion, specifically tailored to the Italian territory (Scope 1).
- AIB – Use EU residual mix electricity emission factors published by the Association of Issuing Bodies to calculate Scope 2 market-based emissions, improving accuracy for operations across EU countries.

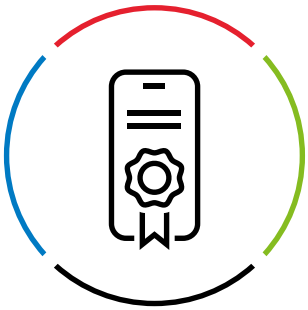

How does this feature work? To use the new databases, users must:

- Enable the desired databases via the Solution Registry form (E00001)
- Map the databases to the appropriate calculation methods using Mapping with Calculation Methods (E00003)

How to access the feature: This functionality is available within the Carbon Emissions module

Carbon Emissions: centralized Emission factor Database Update

When emission factor databases maintain the same structure year over year, a centralized update allows users to efficiently apply new coefficients without manually accessing each Scope- or category-specific emission factor mapping form. This significantly reduces configuration time and minimizes the risk of inconsistencies.
What can users do now? Users can now update emission factor databases centrally through a dedicated form, without needing to access each individual emission factor mapping form.
This functionality applies when database structures remain unchanged and only the emission factor coefficients are updated.
How does this feature work? Users can view the emission factor databases applied in the previous reporting period and switch to a newer version with a single action. The update can be performed either:
Individually within each mapping form, or Globally, across all applicable mappings at once
How to access the feature: This functionality is available within the Carbon Emissions module

Regulatory Solutions

CCH Tagetik Solvency II – Bank of England (BoE) – Prudential Regulatory Authority (PRA)

NEW Module Bank of England – CCH Tagetik Liquidity Reporting for UK Insurers

The Liquidity Reporting module provides insurers with a fully predefined and compliant framework that addresses the latest PRA requirements. It accelerates regulatory compliance by delivering ready-to-use templates, calculations, data quality rules, workflows, and validation mechanisms, reducing dependency on IT and ensuring a consistent, auditable, and streamlined reporting process.

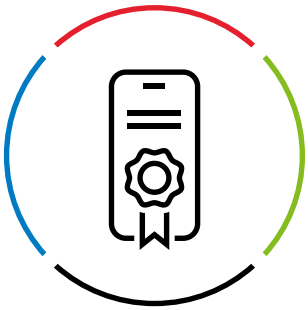

What can users do now? Users can now prepare and submit Insurance Liquidity Reporting in line with all quantitative and qualitative requirements defined by the UK PRA. They can manage monthly, quarterly, annual—and where required, daily—submissions using predefined templates, perform calculations using the embedded engine, run validations aligned with the Bank of England rule set, and generate regulatory-compliant XBRL files directly within the solution.

How does this feature work? The feature operates through a fully integrated regulatory framework composed of:

- A predefined Data Model aligned with the Insurance Liquidity Taxonomy, including Chart of Accounts, hierarchies, dimensions, and closed lists
- Embedded regulatory reporting templates for monthly, quarterly, annual, and supplemental disclosures
- A built-in calculation engine that automatically processes Liquidity Reporting measures
- Data quality and validation rules aligned with the Bank of England rule set, ensuring completeness, consistency, and compliance
- Configurable workflows with audit trails to support governance, role-based responsibilities, and review and approval activities
- ETL capabilities for loading data from multiple sources using predefined integrations
- Automated XBRL mapping and generation, compliant with PRA taxonomy requirements

How to access the feature: The Liquidity Reporting module is available within the CCH® Tagetik application as part of the regulatory reporting suite. Users access it through the licensed CCH Tagetik Liquidity Reporting for UK Insurers solution to:

- Open predefined templates
- Load and validate data
- Execute workflows
- Run reports and dashboards
- Generate XBRL outputs for submission

EBA Consolidated FinRep

NEW Module - Consolidated FinRep EBA Solution

This new fully integrated FinRep regulatory reporting module is built on top of CCH Tagetik Financial Close and Consolidation and aligns with the EBA Reporting Taxonomy as defined by Regulation (EU) 2015/534 of the European Central Bank.

What can users do now? Users can now prepare and submit Consolidated FinRep reporting in compliance with EBA requirements. They can manage standard submissions using predefined templates, perform calculations, run validations aligned with the EBA rule set, and generate regulatory-compliant XBRL files directly within the solution.

How does this feature work? The solution is delivered through an integrated regulatory framework including:

- A predefined Data Model aligned with the FinRep Taxonomy, including Chart of Accounts, hierarchies, and dimensions
- Embedded regulatory reporting templates for quarterly, half-year, and annual disclosures
- Calculation logic that processes reporting positions and reduces operational risk
- Validation rules aligned with the EBA rule set to ensure accuracy and consistency
- Configurable workflows with audit trails supporting governance and approvals
- Automated XBRL mapping and generation, compliant with EBA requirements

How to access the feature: The FinRep module is available within the CCH® Tagetik application as part of the regulatory reporting suite. Users access it through the licensed CCH ® Tagetik FinRep Solution to:

- Open predefined templates
- Load and validate data
- Execute workflows
- Run reports and dashboards
- Generate XBRL outputs for submission

IFRS17 – Insurance Contracts

Compatibility with CCH® Tagetik Intelligent Disclosure Solution

Narrative disclosure documents can now be created and managed using CCH® Tagetik Intelligent Disclosure, extending IFRS 17 reporting beyond structured data into narrative reporting.

What can users do now? Users can now create Intelligent Narrative documents using Intelligent Disclosure, combining IFRS 17 disclosure data with narrative content in a single, controlled environment.

How does this feature work? Intelligent Narrative documents can be generated from IFRS 17 Disclosure Reports, allowing users to add notes, explanations, and textual disclosures while maintaining a direct link to source data.

How to access the feature: via the dedicated Word Add-in, enabling users to enrich IFRS 17 reporting directly within Microsoft Word.

Corporate Tax

Global Minimum Tax

EU Public CbCR: Aligned Configuration and Reporting Consistent with the Official EU iXBRL Generator Template

The EU Public Country-by-Country Reporting (EUPCBCR) directive requires large multinational enterprises with global consolidated revenues above EUR 750 million to publicly disclose key income tax information by each EU Member State in which they operate, and for non-cooperative tax jurisdictions. This increases tax transparency, enables public scrutiny, and shows where profits are generated, and taxes paid.

What can users do now? In the CbCR process, users can now quickly collect the data required for EU Public CBCR using functionality that retrieves information directly from the OECD CbCR step. They can also generate reporting fully aligned with the official regulator template, while also ensuring full data auditability.

How does this feature work? To support time-dependent reporting needed for iXBRL file generation, the following capabilities have been introduced:

- Management of a dedicated perimeter for EUPCBCR, including selection of countries requiring individual (non-aggregated) disclosure
- Automatic population of a time-dependent reporting hierarchy
- A dedicated reporting step that:
  - Recycles data from the OECD CbCR step
  - Supports mass adjustments or manual entry of both quantitative and qualitative information
  - Includes a navigation report to support completion of the EU iXBRL Generator Template

How to access the feature: The functionality is available in the CbCR process, within the Initialization and EU Public CbCR steps.

Advanced GIR Reporting & XML generator to support OECD Compliance

This release improves the user experience in GIR reporting and XML configuration, automating more data retrieval and aligning the XML structure with the latest OECD schema. These enhancements reduce manual effort, increase compliance, and simplify reporting activities.

What can users do now?

- Use expanded GIR mappings to automatically retrieve more data
- Generate XML files aligned with the latest OECD XML schema using the updated standard configuration
- Upload local XSDs directly into the tool to support jurisdiction-specific XML requirements, such as QDMTT
- Perform reporting and filing more easily and accurately, with fewer manual steps

How does this feature work? New mappings collect the additional data points needed for OECD reporting, populating fields and matrices automatically. The XML generator has been updated to reflect the latest

OECD schema and now supports direct upload of local XSDs—auto-generating the XML structure, prefilled tags, and a technical baseline for mapping.

How to access the feature:

- GIR Reporting: available in the Reporting phase
- XML Generation: available in the Filing phase

Operational Transfer Pricing

What-If Analysis Reports

This feature allows users to simulate different scenarios and assess the impact of margin, pricing, or allocation changes before finalizing OTP decisions—supporting proactive decision-making and reducing risk from year-end adjustments.

What can users do now?

- Create snapshots
- Run and compare multiple simulations
- Analyze margin and allocation effects side by side using pre-built reports

How does this feature work? Users generate scenario snapshots and run comparative simulations. Output is visualized through dedicated What-If analysis reports.

How to access the feature: Available in the OTP reporting area under the What-If Analysis report group.

Intercompany Service Recharging

This functionality supports automated allocation of service-related costs across group entities, helping ensure transparency, compliance, and consistency in intercompany service charges.

What can users do now?

- Execute the recharging logic to calculate and allocate service costs using actuals or defined drivers
- Generate intercompany values to support adjustments and documentation

How does this feature work? The system processes input cost data and applies defined recharging logic to allocate costs and generate outputs.

How to access the feature: Available as a task in the OTP workflow under Service Recharging.

Machine Learning Automapping

Automapping accelerates the Chart of Accounts (CoA) standardization process by reducing manual mapping effort and improving accuracy during data ingestion.

What can users do now? Users receive mapping suggestions based on machine learning, drawing from data patterns - accelerating the CoA standardization process.

How does this feature work? The system proposes best-fit account mappings. Users can accept, reject, or refine suggestions. Accuracy improves as the system learns from validations.

How to access the feature: Available in the CoA Automapping section of the OTP setup area.

CCH Tagetik Tax Provision & Reporting

Additional tax content for IAS12 and ASC740 Disclosure Tax Reporting

This enhancement delivers an integrated reporting suite, combining central corporate tax data with insights into sub-central tax effects, supporting compliance with IAS12 and ASC740 standards.

What can users do now? Users now have access to this capability out of the box—eliminating the need for custom-built solutions.

How does this feature work? A preconfigured reporting template is included in the workflow.

How to access the feature: Available during the Group Reporting process phases.

New features for Current Tax Reconciliation and Roll-forward

A more streamlined layout and expanded functionality now offer a full year-by-year view of current tax liabilities, from opening to closing balance.

What can users do now? Access current tax reconciliation and roll-forward features directly, without needing to develop custom solutions.

How does this feature work? A ready-to-use template is included as part of the workflow.

How to access the feature: Available during the Local Tax Accounting process phases.

Additional features for Tax Attributes and Credits

The enhancement introduces support for upward adjustments (additions) and allows users to define whether these impact the tax base—enabling more flexible and accurate tax calculations.

What can users do now? In addition to managing offsets, users can now manage additions and choose how they affect the tax base.

How does this feature work? A new workflow-integrated template enables this extended functionality.

How to access the feature: Available during the Local Tax Accounting process phases.

This document is only intended to highlight certain features of the latest Service Pack. For a full list of new features, please refer to the Service Pack Release Notes. For all technical details, please refer to the User Manuals.

About Wolters Kluwer

Wolters Kluwer (WKL) is a global leader in professional information, software solutions, and services for the healthcare; tax and accounting; governance, risk and compliance; and legal and regulatory sectors. We help our customers make critical decisions every day by providing expert solutions that combine deep domain knowledge with technology and services. Wolters Kluwer reported 2020 annual revenues of €4.6 billion. The group serves customers in over 180 countries, maintains operations in over 40 countries, and employs approximately 19,200 people worldwide. The company is headquartered in Alphen aan den Rijn, the Netherlands. Wolters Kluwer shares are listed on Euronext Amsterdam (WKL) and are included in the AEX and Euronext 100 indices. Wolters Kluwer has a sponsored Level 1 American Depositary Receipt (ADR) program. The ADRs are traded on the over-the-counter market in the U.S. (WTKWY).

For more information, visit **www.wolterskluwer.com**, follow us on **Twitter**, **Facebook**, **LinkedIn** and **YouTube**.
