What's new in CCH® Tagetik 5.3 Service Pack 37

CCH Tagetik brings financial close, planning, and reporting together on a single trusted foundation—with Expert AI embedded across every process. One platform. No trade-offs. Finance moves faster, operates with control, and turns trusted data into confident decisions.

CCH Tagetik 5.3 Service Pack 37 introduces a range of new features designed to enhance the platform and its components. These updates offer greater automation, flexibility, and accuracy, simplifying daily tasks, and allowing more time for value-added analysis.

Platform

Objective AI - Incremental Training & Multi-Scenario Simulation

Why is it useful: Improves model efficiency and flexibility by reducing retraining effort and enabling multiple simulation scenarios to run in parallel.

What can users do now:

- Update models incrementally using new data instead of performing a full retraining
- Run multiple simulation scenarios in parallel within a single execution
- Control which records are included in each scenario without duplicating datasets

How does this feature work: Incremental training updates the existing model while preserving historical consistency. For simulations, rows can be grouped into scenarios using the ROW_FLAG field and processed simultaneously.

Workflow Integration for Intelligent Data Loader

Why is it useful: Brings data integration directly into business workflows, reducing manual steps and improving process orchestration.

What can users do now:

- Execute previously saved Intelligent Data Loader configurations directly from CCH Tagetik workflows
- Incorporate data-loading activities into both the new Process Cockpit and Legacy Cockpit

How to access this feature: Available as a new Intelligent Data Loader Workflow Task from SP37.

Enhanced Workflow Automation & Process Hub

Why is it useful: Streamlines workflow execution and reduces repetitive actions across submissions, approvals, rejections, and consolidation activities.

What can users do now:

- Configure submission, approval, and rejection email events across any dimension
- Automatically process related workflow steps when submitting or rejecting in Process Hub
- Use Copy Consolidated Amount on Original Amount directly from Process Hub

Seamless Workflow Experience

Why is it useful: Makes navigating tasks, forms, and reports faster and more intuitive while keeping users focused on their current workflow.

What can users do now:

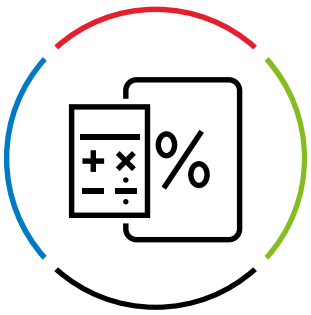

- Keep assigned tasks and key task information visible while working
- Open related forms and reports without interrupting the workflow
- Navigate between open reports using contextual links and breadcrumbs
- Use full-screen mode for activities requiring more workspace

Data Entry - Create Dimension Members Directly from Data Entry

Why is it useful: Reduces interruptions during data entry by allowing users to create required dimension members without leaving the form.

What can users do now:

- Create a new dimension member directly from a Data Entry form
- Enter its code and description with a simple right-click
- Automatically inherit hierarchy placement and security from the selected element
- Use the new member immediately for data input

Close

CCH Tagetik Financial Close & Consolidation

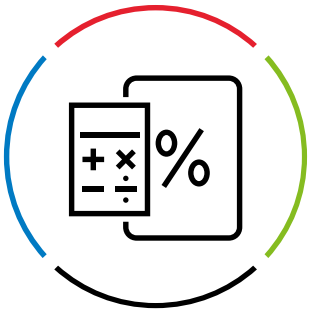

Rules Engine Designer New Configuration Features

Why is it useful: Provides greater flexibility and efficiency when configuring consolidation rules, reducing manual effort, and the risk of inconsistencies.

What can users do now:

- Define Variation Type directly as an output dimension, with flexible options to control how it is assigned
- Use Account Dynamic Groups as input dimensions instead of selecting individual accounts or hierarchy nodes
- Automatically keep rule configurations aligned as account definitions change

How does this feature work: within Rules Engine Designer (RED), users can configure Variation Type behavior in output dimensions and select dynamic account groups in input dimensions for both original and consolidation scenarios.

Account Reconciliation

Enhanced Reconciliation Experience

Why is it useful: Improves visibility and productivity with a new dashboard and Grid View, helping users identify risks, manage items faster, and accelerate the close.

What can users do now:

- Monitor KPIs and risk across reconciliations
- Drill into entity-level details
- Bulk edit, clone, and filter items in the new Grid View

Collaborative Reconciliation Cockpit

Why is it useful: Centralizes reconciliation discussions and supporting information, improving collaboration and accountability.

What can users do now:

- Comment directly on reconciliation items
- Mention users, add attachments, and assign conversations
- Resolve threads once actions are complete

Custom Reconciliation Frequencies

Why is it useful: Provides more flexibility to align reconciliation schedules with internal policies and compliance needs.

What can users do now:

- Define custom frequencies and select specific reconciliation months
- Apply custom schedules through existing Admin Rules

How to access this feature: Available from the Admin Rules interface.

Regulatory Solutions

Operational Transfer Pricing

Multi-Level Transfer Pricing Analysis & Calculation Details Report

Why is it useful: Provides a structured, top-down view of Transfer Pricing (TP) performance while improving transparency into how results are calculated.

What can users do now:

- Start analysis at Company and TP Function level, then drill down to Trading Partner detail
- Review formulas, inputs, parameters, and calculation steps for full traceability and easier validation

How to access the feature: Available within existing TP reporting views, with Calculation Details accessible from individual transactions or segments.

Dynamic Benchmark Adjustments Management

Why is it useful: Makes benchmarks more accurate and adaptable by incorporating business-specific factors such as FX risk or logistics costs.

What can users do now:

- Define flexible adjustment elements and apply percentage-based changes by TP method, function, or entity
- Automatically include these adjustments in margin calculations without manual recalculation

How to access the feature: Configured within the TP data model and configuration layer, then automatically applied during monitoring.

Operational Price Settings for Intercompany Pricing

Why is it useful: Automates intercompany price setting based on underlying costs and pricing policies, reducing manual effort and improving consistency.

What can users do now:

- Automatically calculate price lists using material-level costs and configurable markups
- Apply pricing policies consistently across markets and entities
- Reuse existing pricing logic for new products or materials

How to access the feature: Available within the dedicated OTP price-setting workflow.

ESG Metrics & KPI / CSRD

Data Entry Change Log

Why is it useful: Improves traceability during data collection by providing a clear record of changes made to ESG data.

What can users do now:

- View a ready-to-use change log showing updates made through Data Entry reports and data-loading procedures such as QDL
- Track when changes were made and support stronger review and audit processes

How does this feature work: Changes are automatically recorded whenever data is saved or loaded, creating a historical log of adjustments. How to access the feature: Available within the ESG Metrics & KPI / CSRD module.

Scenario & Period-Based Consolidation Configuration

Why is it useful: Provides greater flexibility when consolidation structures change over time by allowing configurations to vary by scenario and period.

What can users do now:

- Maintain a dedicated consolidation configuration for each scenario and period
- Adjust consolidation perimeters and entity structures over time without overwriting previous configurations

How does this feature work: The solution stores consolidation configurations separately by scenario and period, allowing the appropriate setup to be applied dynamically.

How to access the feature: Available within the ESG Metrics & KPI / CSRD module.

Ready-to-Use Standard Omnibus

Why is it useful: Provides organizations at an earlier stage of their sustainability reporting journey with a faster, more standardized path to CSRD reporting.

What can users do now:

- Start ESG data collection and reporting using a predefined, standardized setup
- Reduce configuration and maintenance effort by using ready-to-use KPI structures and reporting content

How does this feature work: A streamlined data model and reporting process are delivered out of the box, including predefined Post-Omnibus CSRD KPI accounts and multidimensional reporting structures.

How to access the feature: Available within the ESG Metrics & KPI / CSRD module.

ESG Planning & Analytics

Conservative Scaling Factor

Why is it useful: Supports more robust Business-as-Usual (BAU) emissions forecasts by incorporating group-level growth dynamics into entity-level projections.

What can users do now:

- Build more conservative, risk-aware emissions forecasts
- Compare group- and entity-level scaling factors to understand how assumptions affect projections

How does this feature work: A dedicated report compares driver-specific scaling factors and highlights where group-level factors are applied to entity-level forecasts.

How to access the feature: Available within the ESG Planning & Analytics module.

ESG EU Taxonomy

Simplified External Data Input for Insurance & Reinsurance

Why is it useful: Simplifies external data collection by reducing the number of issuer KPI records required.

What can users do now:

- Enter a counterparty's CapEx and Turnover percentages in a single row
- Reduce the number of records required for external data input

How does this feature work: A new external-data input partition supports the simplified method while maintaining the option to process historical data using the previous approach.

How to access the feature: Available within the EU Taxonomy module – Insurance & Reinsurance Undertakings section.

iXBRL – ESMA ESEF Taxonomy 2025 & Tagging Enhancements

Why is it useful: Keeps digital reporting aligned with the latest ESMA requirements while making tagging and validation more transparent and efficient.

What can users do now:

- Use ESMA ESEF Taxonomy 2025, including IAS 1 and IFRS 18 entry points
- View calculation relationships and additional calculation-tree details directly during review
- Benefit from more reliable context handling during tagging

ESG Carbon Emission

Customizable Driver Data Entry Fields

Why is it useful: Provides greater flexibility in ESG data collection by allowing Data Entry forms to better reflect specific Scope-category requirements.

What can users do now:

- Customize Driver Data Entry fields based on specific data collection and calculation needs
- Tailor Scope-category forms for a more relevant and efficient user experience

Global Minimum Tax

GloBE Information Return (GIR) Compliance Enhancements and Correction /Filing Improvements

Why is it useful: R14 simplifies GIR correction filings by automatically retrieving the technical references required for corrective submissions. Submitted XML files are also archived, improving traceability and supporting audit requirements.

What can users do now:

- Create corrective filings without manually identifying and populating references from previously accepted submissions
- Access the history of filed XMLs for future consultation and audit purposes

How does this feature work: When preparing a corrective filing, the solution retrieves the relevant identifiers from the latest accepted submission and automatically populates the required references. Accepted XML submissions are also stored in a historical repository.

How to access the feature: Available within the P2_CORR correction filing process, where the filing phase now supports automatic reference population and historical XML archiving.

Solvency II

NEW: IRRD – EIOPA Insurance Recovery and Resolution Directive Solution

Why is it useful: Provides insurers and reinsurers with a predefined framework to support EIOPA resolution reporting requirements under the Insurance Recovery and Resolution Directive.

What can users do now:

- Use a predefined configuration aligned with the official EIOPA IRRD data model
- Prepare for resolution reporting within CCH Tagetik using dedicated documentation and regulatory structures

How to access this feature: Available as part of the new CCH Tagetik IRRD Solution – Fall26 release.

Lease Accounting

Enhanced Deferred Tax & Contract Management

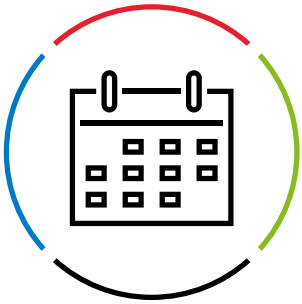

Why is it useful: Provides greater flexibility and control over deferred tax calculations while improving visibility and auditability of lease contract changes.

What can users do now:

- Configure deferred tax rates by process, year, entity, asset class, and period
- Automatically calculate deferred tax adjustments when rates change
- Track contract creation dates for easier month-end review and audit
- Configure how "ASSET_VAR" is handled during transfer events

How to access this feature: Available in Lease Accounting IFRS 16 – R2.37.

Plan

Financial Planning

Instant Plan Expansion

Why is it useful: Allows planners to adapt models quickly as business needs change, reducing admin dependency and speeding up planning cycles.

What can users do now:

- Add new planning items directly within the working sheet
- Expand scenarios without leaving the current view or requiring custom setup
- Keep what-if analysis and planning changes finance-owned

How does this feature work: Users can add new items directly in the planning sheet, with the model expanding in place to support faster scenario modeling and decision-making.

Supply Chain Planning

Checkmark Column

Why is it useful: Makes it easier to track review progress directly within planning grids.

What can users do now:

- Flag rows as reviewed using a dedicated Checkmark column
- Sort grid rows based on review status

Report

Intelligent Disclosure

Defining Document Parts in PowerPoint

Why is it useful: Provides more granular control over presentation content, helping organizations manage access, responsibilities, and sensitive information more effectively.

What can users do now:

- Define document parts directly within PowerPoint slides
- Assign view or edit permissions to individual users or user groups
- Segment presentations into logical sections for clearer ownership and collaboration

How does this feature work: Document parts are configured directly through the Intelligent Disclosure PowerPoint Add-in, with permissions applied to each section of the presentation.

This document is only intended to highlight certain features of the latest Service Pack. For a full list of new features, please refer to the Service Pack Release Notes. For all technical details, please refer to the User Manuals.

About Wolters Kluwer

Wolters Kluwer (WKL) is a global leader in professional information, software solutions, and services for the healthcare; tax and accounting; governance, risk and compliance; and legal and regulatory sectors. We help our customers make critical decisions every day by providing expert solutions that combine deep domain knowledge with technology and services. Wolters Kluwer reported 2020 annual revenues of €4.6 billion. The group serves customers in over 180 countries, maintains operations in over 40 countries, and employs approximately 19,200 people worldwide. The company is headquartered in Alphen aan den Rijn, the Netherlands. Wolters Kluwer shares are listed on Euronext Amsterdam (WKL) and are included in the AEX and Euronext 100 indices. Wolters Kluwer has a sponsored Level 1 American Depositary Receipt (ADR) program. The ADRs are traded on the over-the-counter market in the U.S. (WTKWY).
