Need some help? 47

WORKSHOP 1 – Browsing the purposes of a CCH Tagetik form

Objective	Learn how to access the CCH Tagetik forms in the three different purposes: • Navigation mode • Data Entry mode • Design mode To learn that: • The access mode depends on the User role • A Data entry form can be run both in navigation and data entry modes, while an Output form can be run only in navigation mode
Navigation and Data entry mode	Perform the following tasks: Log in to the Excel add-in with user: • Username: **tyrell** • Password: **tgk** 1. Click Navigation  on the **CCH Tagetik ribbon bar** to activate the navigation leftpane 2. Data Entry Forms are stored under the folder DE - Data entry, the Output Forms are stored under the folder OUT - Output.You can run both types of Forms in navigation mode 3. Run the Form  **0003 - Product revenues by area** by selecting as parameters: • Scenario: **2049ACT_T – 2049 Actual Training**

- Entity: **B00 - Monsters Inc**

4. Beware that:
    - The **navigation ribbon bar** is now available on the right of the CCH Tagetik ribbon bar
    - The color of the cells is white, and the values are editable but, in navigation mode, any changes applied won't be stored in the system
5. Close the form
6. Click **Navigation** on the CCH Tagetik ribbon bar to disable the navigation mode
7. Click **Data entry** on the CCH Tagetik ribbon bar to activate the Data Entry left pane
8. Select CONS_T process from the left drop-down menu of the Data entry left-pane
9. Run the Form  **0003 – Product revenues by area** selecting as parameters:
    - Scenario: **2049ACT_T – 2049 Actual Training**
    - Entity: **B00 – Monsters Inc**
10. Check that white cells cannot be modified.
11. Check that you can modify the value of the green cells.
12. Try to change some value and save using the standard Excel save button.
13. Close the form

Design mode

1. Check that button **Design** on CCH Tagetik ribbon bar is disabled.
2. **Tyrell** is an **End user** and cannot access forms in design mode.
3. Log out
4. Log in to the Excel add-in with user:

User: **EMPEROR**

Password: **tgk**

5. Check EMPEROR can access the Design mode 

WORKSHOP 2 – Creation of a Line-by-line form

Objective

Learn how to:

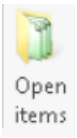

- create a Line-by-line form
- use row,column and matrix filters
- use the open item feature to activate the different opened forms

Learn that a line-by-line matrix displays the records held in a dataset

Creation of a Line-by-line form

Perform the following tasks:

1. Log in the CCH Tagetik web application:
   - Username: **EMPEROR**
   - Password: **tgk**
2. Access the Analytical workspace **Economic details**.
3. Access the dataset **Financial data** and check the structure.
4. Click  on the dataset tile to access the available partitions.
5. Click  and check that the number of records is 686.
6. Go back to the Excel interface
7. Activate the **Design** mode 
8. Expand the **$AW - Analytical workspaces** folder
9. Select **$002 - Economic details** folder
10. Click  to add a new form:
    - Code: **A001**
    - Description: **Line by line form**

11. Click 

on the CCH® Tagetik ribbon bar to activate the **Opens item** mode
12. Select an Excel cell and click the **New Matrix** button  on the Design ribbon bar. Best practice: the top-left element of the Matrix should not be on cell A1, but a bit lower right, e.g., on cell C8)
13. Select the dataset **000001 – Financial Data** below the folder **001 – Economic Details**
14. Tick the option "**Line item management**" to create a line-by-line matrix and click OK
15. Select COUNTER in the left pane
16. Click  to add it in the row filters
17. Select all the elements below the folder **000001 – Financial data**
18. Click  to add the selection in the column filters.
19. Click Ok
20. Click  on the **Design** ribbon bar to run a preview.
21. The outcome displays the 686 records stored in the partition of the dataset **Financial data**.

Performing the following task:

1. Access the **Open items** feature left pane.
2. Select the sheet **1** to highlight the form A001 in **design** mode.
3. Select the **matrix00** icon.
4. Click and rename the matrix as **Matrix line-by-line.**
5. Double click a cell of the matrix to edit the matrix structure.

Definition of a Matrix filter

6. Select the tab **Matrix filters**
7. Expand the folder Entity
8. Select the node **A-Subgroup A**, from **Actual view reporting** hierarchy
9. Click  to add it as Matrix filter and click OK
10. Run a preview of the form
11. Check that the outcome displays only 568 records, according with the entities held in the Matrix filter node (**A00,A01,A02**)
12. Access the open items feature left pane
13. Double-click the **matrix line-by-line** icon to access the matrix structure.
14. Replace the Matrix filter with the entity **A00 – Stark Industries** (select it below the node Subgroup A)
15. Click Ok
16. Run the form
17. Check that the outcome displays only 537 records, according with the entity defined in the Matrix filter **(A00) .**
18. Check the 3 previews run recently in the folder **Previews** of the open items feature : each one displays the outcome according with the different selection applied in the matrix filters
    - No filter
    - Node of Entity (A - Subgroup A)
    - Single Entity (A00 - Stark industries)
19. Close the previews.
20. Save the form.

WORKSHOP 3 - Creation of a Multidimensional form

Objective	Learn how to: • Create a simple Output Multidimensional Form • Use the row, column and matrix filters • Check the dimensions that filter a matrix cell using cell properties feature
Creation of a Multidimensional form	Perform the following tasks: 1. Access Design tab in the left pane 2. Add a new form beneath the **$002 -Economic Details** folder with : • Code: **A002** • Description: **Multidimensional form** 3. The form must have the same outcome of the **Form_ A002.xlsx**, available in the folder Workshops > Output Reporting. 4. Select cell C8 5. Add a new Matrix  6. Select the Dataset **000001-Financial Data** (below the **001 - Economic Details folder**) and click OK 7. Expand the Accounts dimension in the left pane 8. Select the root of the hierarchy **X00 - Management** 9. Find by the Search function  the accounts displayed into the rows of the **Form_A002.xlsx** 10. Add them to the rows 11. Check the structure of the columns into the file Form A002.xlsx 12. Select the elements **2055ACT** and **2054ACT** into Scenario flat list 

13. Add them to the columns
14. Select the elements **06 – June** and **12 – December** into Period flat list
15. Nest them below the Scenario elements on the columns.
16. Access **Matrix filters** tab
17. Add the node **Europe**, from **Geographical view** hierarchy of the dimension entity and click OK.
18. Apply to the matrix the format of **Form_A002.xlsx** using the “Format Painter” excel option.
19. Save the form. Beware of the error message, due to the missing of the mandatory dimension “Measure”.
20. Double-click one cell of the matrix to edit the matrix structure.
21. Add the measure **AMOUNT** on the Matrix filters. Click Ok and Save.
22. Run a preview
23. Enable **Cell properties** on Navigation ribbon bar.
24. Select a matrix cell.
25. Check that the outcome displays the amounts aggregated for the entity **Europe** on cell property feature.
26. Close the preview of the form.
27. Access the matrix structure from design mode.
28. Replace the node Europe with the entity **A00 – Stark Industries** in the Matrix filter.
29. Run the form.
30. Enable Cell properties on Navigation ribbon bar.
31. Select a matrix cell.
32. Check that the outcome displays the amounts of the single entity **A00 – Stark industries** as displayed in the Form_A002.xlsx on cell property feature.

33. Save and Close the form

WORKSHOP 4 - Creation of a Multitemplate form

Objective

Learn how to:

- Create a Multitemplate Form
- Create a copy of an existing form
- Setup the matrix headers

Creation of a Multitemplate form

Perform the following tasks:

1. Select form **A002 - Multidimensional form** in the Design left pane
2. Click the button  to copy the form
3. Select **$002- Economic Details** folder.
4. Click the button Paste  and define the attributes :
   - Code : **A003**
   - Description : **Multitemplate form**
5. The form must have the same outcome of the file **Form_A003.xlsx**, available in the Workshops > Output Reporting folder.
6. Double click a cell of the matrix to edit the matrix structure.
7. Access the tab **Headers**.
8. Expand the Predefined functions node on top left frame.
9. Open the **X00 - Management** hierarchy.
10. Select the code.
11. Select description below the headers on the top right frame.
12. Click on Concatenate 
13. Click the button OR elements 

14. Use the arrow button to Move the code above description to have an Account header as required.
15. Click Ok button of matrix wizard.
16. Add a new sheet to the form with the standard Excel command.
17. Enable the **Open item** feature  , available on the CCH Tagetik ribbon bar.
18. Select **Matrix00** below Template **1**.
19. Right click to Rename the matrix in **Matrix Costs COST**
20. Copy the Matrix Costs.
21. Select Template **2** on the Open items tab.
22. Select cell **C8** on the Template **2.**
23. Click Paste on the open item to paste the matrix on the Template **2.**
24. Set the name of the matrix as **Matrix Revenues .**
25. Double click one cell of the Revenues matrix to access its structure.
26. Delete the Accounts on the the row filters.
27. Add a new set of accounts according to the matrix displayed in the sheet REVENUES of the **Form_ A003.xlsx**
28. Access the Tab **Headers.**
29. Select the code under the **X00 - Management** hierarchy
30. Add it to the headers.
31. Select **Code** and move it above **Description** using Arrow button  . The code and the description of the Accounts will be located in two different columns.
32. Click Ok
33. Apply the format of **Form_A003.xlsx to the matrix** using the Format painter Excel option

34. Use the open item to rename the 2 sheets of the form as the form **Form_A003.xlsx** .
35. Save the form
36. Run a preview of the form and check that the outcome is like the **Form_A003.xlsx**

WORKSHOP 5 - Tab and Form filters

Objective

- Learn how to apply tab and form filters

Perform the following tasks:

How to apply Tab and Form filters

1. Select the form **A003 - Multitemplate form** into the Design tab of the left pane.
2. Click the button  to copy the selected form.
3. Select **$002 - Economic Details** folder.
4. Click the button Paste  and define the attributes :
   - Code : **A004**
   - Description : **Tab and form filters**
5. The form must have the same outcome of the file **Form_A004.xlsx**, available in the Workshops > Output Reporting
6. Remove the matrix filter Entity **A00 - Stark industries** on both matrices of the form.
7. Click  on the Design ribbon bar to access the **Form filters** definition window.
8. Add Entity **A00 – Stark**
9. Click Ok.
10. Click  to access the **Tab filters** definition window.
11. Select Customer **C01 - Mediaplanet, C02 - Teamsupport, C03 - Fresh desk** on the dimensions hierarchy.
12. Nest the selected customers below **COSTS** template.
13. Select the nodes **X01 - Software, X02 – Hardware, X03 - Electronics** below the Product hierarchy Products by types.
14. Nest the selected elements below **REVENUES**

template.

15. Click OK.
16. Run a preview of the form.
17. Enable the **Cell properties**  option on the Navigation ribbon bar.
18. Check how the tab and form filters affects the content of the cell filters in the different tabs.
19. Save and Close the form.

WORKSHOP 6 - Parameters and Cell fields

Objective

- Learn how to reduce the form maintenance using System and Custom parameters
- Display on the form dimensional and not dimensional information using cell fields.

How to select a dimension at Runtime : System Parameters

Perform the following tasks:

1. Access design left pane
2. Create a copy of the form **A004 - Tab & form filters**.
3. Define the following attributes for the new form:
   - Code: **A005**
   - Description: **Parameters and Cell fields**
4. The form must have the same outcome of the **Form_ A005.xlsx**, available in the Workshops > Output Reporting
5. Delete the Sheet **REVENUES** with Excel command
6. Access the Tab filters 
7. Select one of the lowest level element.
8. Click  to remove the tab filters.
9. Apply to the matrix headers the same layout of the file **Form_A005.xlsx.**
10. Double click one cell of the matrix to access its structure.
11. Remove the accounts on the rows.
12. Add the new Accounts on the rows following the excel form FORM_A005.xlsx . Select the elements from **X00 - Management** hierarchy, below the node **002A - Personnel Costs.**
13. Select the parametric element **$SCE_P – Scenario** below Scenario dimension.

14. Select the two Scenarios into the column filters
15. Click the button replace  to have the parametric scenario on the column filters.
16. Select the second column **$SCE_P – Scenario** in the column filters.
17. Select the property Navigation into Property grid.
18. Select Previous and click the button 
19. Click Ok twice.
20. Click  on design ribbon bar to access **Form filters**
21. Remove **A00 – Stark industries**
22. Add the parameter **$AZI_03_P – Geographical view** under the **WORLD - Geographical view** hierarchy of the dimension Entity.
23. Access the web application.
24. Access tile Dimensions.
25. Access Scenario.
26. Select Scenario **2055ACT – 2055 Actual.**
27. Access Reference frame.
28. Set **2054ACT – 2054 Actual** as Previous Scenario.
29. Save the changes.
30. Go back to the Excel interface.
31. Run a preview of form and select the following parameters:

    Scenario: **2055ACT – 2055 Actual**

    Geographical view: **EU - Europe**
32. Check that the system has retrieved **2054ACT – 2054 Actual** as Previous Scenario.

How to select a Perform the following tasks:

dimension at Runtime : Custom Parameters

1. Click Definition  on design ribbon bar.
2. Click  to add a new custom parameter.
3. Define the following attributes:
    - Code: **EMP_NODES**
    - Description: **Employees by contract nodes**
    - Mandatory: **Ticked**
    - Dimensions: **01 – Employees by Contract** hierarchy (below Employee dimension)
4. Reach tab Restrictions.
5. Tick only the option **Allow nodes**.
6. Save.
7. Add the newly created custom parameter **EMP_NODES** as Form filter.
8. Run a preview of the form selecting the following parameters:

    Scenario: **2055ACT**

    Employee by contract nodes: **X01 - Full time**

    Geographical view: **A00 - Stark Industries**

Additional information displayed on the Form: Cell fields

Perform the following tasks to add the cell fields reported in the sample form **Form_A005.xlsx**:

1. Access the file **Form_A005.xlsx**
2. Copy the cells in the area **C2:C5**
3. Access the form **A005 - Parameters and cell fields** in design mode.
4. Paste the copied cells in the same range of the file Form_A005.xlsx

---

5. Select cell **D2**. Let's insert here a cell field that retrieves the form description at runtime.
6. **Right-click >Tagetik > New Cell field** or select Cell field from ribbon bar **Design.**
7. In the **Cell field** wizard, you have to select the formula to retrieve the Description of the form.

   Follow these steps:

   - Other elements > report > Form > Description > add it on the right pane 
8. Click Ok
9. Repeat the same operations to add the other cell fields
10. Run the form without changing the parameters
11. Check the outcome with the **Form_A005.xlsx**

Need any help? Here are some hints

- In Cell field wizard you can retrieve information of user below: Other elements > User
- In Cell field wizard you can retrieve information of Entity below: Entity -> World > Geographical view
- In Cell field wizard you can retrieve information of Employee below: Employee > 01 > Employees by Contract

WORKSHOP 7 - Additional Matrix features

Objective

To create an Output Multidimensional Form that leverages the following features:

- Formulas
- Placeholder
- Dictionary
- Autofit columns
- Prevailing Formula .

Apply some Matrix features

Perform the following tasks:

1. Make a copy of the form **A005 - Parameters and cell fields** from Design left pane.
2. Select the destination folder **$002 – Economic details.**
3. Paste the form and insert the attributes:
    - Code: **A006**
    - Description: **Additional Matrix features**
4. The form must have the same outcome of the file **Form_A006.xlsx**, available in the Workshops > Output Reporting.
5. Access to Form filters.
6. Remove **EMP_NODES – Employees by Contract**
7. Select **$DEST1_DPT_P - Departments** below **Cost Center > Departments** and add it as form filter
8. Click Ok.
9. Replace the cell field Employee with the Cost Center code and description.
10. Double-click on a cell of the matrix to access the matrix structure.
11. Remove the Accounts on the rows.

12. Insert a new set of Accounts on the row filters as shown in the file **Form_A006.xlsx**. The accounts can be picked from the **X00 – Management** hierarchy
13. Select the row filter **Other revenues**.
14. Click  to add a formula below the filter Other revenues
15. The total must calculate the total of revenues **{1}+{2}+{3}**
16. Select **Dictionary** into property grid to add a dictionary on the formula.
17. Insert the dictionary term **Total revenues** and click Ok
18. Select the row filter **Other general and commercial costs**.
19. Click on  to add a formula below the filter Other general and commercial costs.
20. The formula must calculate the Total of Costs **SUM({5}:{10}).**
21. Select **Dictionary** into property grid to add a dictionary on the formula.
22. Insert the dictionary term **Total costs** and click Ok.
23. Click  to add a Placeholder.
24. Add a new formula below the placeholder.
25. The formula must calculate the gross margin: the difference between Total revenues and Total costs: **{4} - {11}**.
26. Define a dictionary term for the formula: **Gross Margin**
27. Add a formula as last column into the column filters. The formula must display the difference between December of current Scenario and December of Previous Scenario
28. Type this Formula in the editor: **{2} - {4}**
29. Tick the option **Prevailing formula,** below the Formula

section in the property grid

30. Set a dictionary term in the property grid: **Variance**
31. Access the Matrix options tab to set up the Autofit columns “**By value**"
32. Click Ok to close the wizard matrix
33. Apply the Excel format to the matrix to display the format of the file **Form_A006.xlsx**
34. Save the form
35. Run a preview selecting the parameters:
    - Scenario : **2055ACT – 2055 Actual**
    - Geographical view : **EU – Europe**
    - Departments : **X01 – Marketing and Sales**
36. Check the outcome

Need any help? Here are some hints

- To replace a cell field: double click > delete the existing value > select the Cost center description below Departments hierarchy> add 

WORKSHOP 8 - Currency management

Objective	Learn how to convert amounts at a preset exchange rate
Set the conversion on the currency	Perform the following tasks: 1. Duplicate the form A006 - Additional matrix features. 2. Define the following attributes: • Code: A007 • Description: Currency Management 3. The form must have the same outcome of the file Form_A007.xlsx, available in the Workshops > Output Reporting. 4. Replace the cell field Cost Center with a Cell field Currency. 5. Access the form filters and remove $DEST1_DPT_P – Departments 6. Click ok. 7. Double click one cell of the matrix to access its structure. 8. Access the Matrix filter. 9. Select JPY – Japanese Yen below Currency dimension and add it as Matrix filter. 10. Click Ok. 11. Run a preview of the form selecting the following parameters: • Scenario: 2055ACT • Entity: Europe 12. Close the form in navigation mode. 13. Double click to open the matrix and access Matrix filters. 14. Remove the Currency JPY – Japanese yen.

15. Select the Currency system parameter **$VAL_P – Currency** below Currency dimension and add it as Matrix filter.
16. Click the filter **$VAL_P – Currency** in the right pane.
17. Look at the property grid, click Conversion and open the dropdown menu.
18. Select the Conversion **Based on Measures**
19. Click Ok.
20. Access the web application.
21. Access the Analytical Workspaces and select the workspace **Economic details**
22. Click the tile to access the structure of the dataset **Financials data**
23. Select the Amount field and click Details on the right
24. Set the Conversion type as Average FX rate and Save
25. Run a preview of the form and select:

    Geographical view: **A00 - Stark Industries**

    Scenario: **2055ACT**

    Currency: **EUR**
26. Check that the outcome is like the form **A007.xlsx**

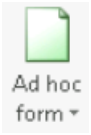

WORKSHOP 9 - Time roll-up

Objective

- Learn how to work with a report ad hoc locally and how to share with other users
- Learn how to set a roll-up logic on a Measure for the Period dimension
- Check on reporting the behavior of Measures depending on period length defined in a form

Set a time roll-up logic

Perform the following tasks:

1. Click 

on CCH Tagetik ribbon bar to create a new form Ad hoc.
2. The form must have the same outcome of the file **Form_A008.xlsx**, available in the Workshops > Output Reporting
3. Select cell **C10**.
4. Click 

on the Design ribbon bar to add a new matrix.
5. Select the dataset **000001 - Financials data** below the folder **002 - Economic details.**
6. Click Ok.
7. Expand the folder Number under the **Measures and Custom fields** on the left pane
8. Select **AMOUNT** and drag it on the rows
9. Expand the Period Length folder on the left pane
10. Select:
    - **LUN_3 – Quarter**
    - **LUN_6 – Half Year**
    - **LUN_12 – Annual**

11. Add them on the columns
12. Expand the Period dimension on the left pane
13. Select: **March, June, September, December** and add them on the columns
14. Remove :
    - March and September beneath **LUN_6 – Half Year**
    - March, June, September beneath **LUN_12 – Annual**
15. Access Matrix filters
16. Add the following elements:
    - Scenario: **$SCE_P – Scenario**
    - Account: **50010 – Product Revenues**
    - Entity: **$AZI_P - Entity**
17. Click Ok.
18. Define the same cell fields displayed in the form **Form_A008.xlsx**
19. Run a preview of the form selecting the following parameters:
    - Scenario: **2055ACT**
    - Entity: **A00 - Stark industries**
20. Check that the outcome is the same to the form **Form_A008.xlsx**
21. Close the preview .
22. Save the ad hoc form (with Macro-enabled worksheet) on the desktop as **Time rollup test.xlsx**
23. Add a new form on the Design left pane below the folder **$002 - Economic details**:
    - Code: **A008**
    - Description: **Time rollup**

24. Click  and select the file Time rollup test.xlsx recently saved on the desktop to import its structure in the new form.

WORKSHOP 10 - Dynamicity

Objective

Learn how to use

- benefit of an existing template with logo and predefined cell fields
- create a form with Dynamic structure
- Use the Standard Tagetik Style to set the correct format at runtime

Set a dynamic matrix

Perform the following tasks:

1. Access design left pane
2. Create a copy of the form **0_TMP - Template** .
3. Define the following attributes:
   - Code: **A009**
   - Description: **Dynamicity**
4. The form must have the same outcome of the file **Form_A009.xlsx**, available in the Workshops > Output Reporting
5. Select cell **C11** and add a new Matrix 
6. Select **000001 - Financial Data** and click Ok
7. Expand the **Scenario** dimension.
8. Select the Scenario parameter **$SCE_P - Scenario** and add it twice on the columns.
9. Insert the formula **{1}-{2}** on the columns to calculate the difference between the two Scenarios
10. Set the dictionary **Variance** on the formula.
11. Set the second column as previous Scenario.
12. Expand the **Entity** dimension on the left pane.
13. Expand the **WORLD - Geographical view** hierarchy.
14. Select the node **EU - Europe** and add it to the rows.

15. Select the row added and expand the **Advanced selection** in the property grid.
16. Click Selection type and open the drop down menu on the right.
17. Select **Insert lowest level elements** to retrieve the lowest elements of the node Europe.
18. Access matrix filter tab.
19. Add the following elements:
    - Measure: **AMOUNT**
    - Period: **$PER_P - Period**
    - Account: **50010 - Product revenues**
20. Click Ok
21. Run the form.
22. Select the following parameters:
    - Scenario: **2055ACT - 2055 Actual**
    - Period: **12 - December**
23. Check the different layout between the matrix in design mode and in navigation mode: the dynamicity affects the layout of the matrix.
24. Select the form in Design mode.
25. Open the Matrix.
26. Expand the **Product** dimension in the left pane
27. Select **X00 - Products by types**
28. Nest the selected node below **EU - Europe**
29. Select the row added and expand the **Advanced selection** in the property grid.
30. Set the Selection type as **Insert Children**
31. Access the Matrix options
32. Tick the option **Do not repeat cloned headers on each row/column**

33. Click Ok
34. Run a preview selecting the parameters:

    Scenario : **2055ACT – 2055 Actual**

    Period : **12 - December**
35. Check the outcome and compare the result with the excel provided: the format is not correct

---

How to set the Standard Tagetik style

Perform the following tasks:

1. Access the form in Design mode.
2. Access **Form options**  on the Design ribbon bar
3. Click **Layout options** tab
4. Select **TGK - Simple Style** in the drop down menu on the right of Tagetik style
5. Click Ok
6. Double click to open the Matrix
7. Access the Matrix options
8. Tick the option **Apply Tagetik style** on the top right of the window
9. Click Ok
10. Run and select the parameters:
    - Scenario : **2055ACT – 2055 Actual**
    - Period : **12**
11. Compare the outcome with the excel provided

WORKSHOP 11 - Dynamicity: Pro tips

Objective

- Learn how to improve visualization and automatic aggregations of dynamic matrixes
- Learn how to use a parameter combined with dynamicity.

Apply Pruning and Subtotals on a dynamic matrix

Perform the following tasks:

1. Create a copy of the form **A009 - Dynamicity**
2. Define the following attributes:
   - Code: **A010**
   - Description: **Dynamicity: Pro tips**
3. The form must have the same outcome of the file **Form_A010.xlsx**, available in the Workshops > Output Reporting
4. Click **Definition** 

on the Design ribbon bar to create a Custom parameter.
5. Add a new Custom parameter and set the following attributes:
   - Code: **ENT_NODES**
   - Description: **Geographical view nodes**
   - Mandatory: **Ticked**
   - Dimensions: select below Entity **WORLD - Geographical view**
6. Reach tab Restrictions.
7. Leave only the **Allow node** option ticked.
8. Save and exit.
9. Open the Matrix.
10. Select the parameter **ENT_NODES - Geographical view nodes** created recently.

11. Select the row filter **EU - Europe**.
12. Click the button  to replace **EU-Europe** with the parameter **ENT_NODES - Geographical view nodes**.
13. Select the row filter **ENT_NODES - Geographical view nodes**
14. Expand the Advanced selection in the property grid.
15. Set selection type as **Insert children**.
16. Select the row filter **X00 - Products by types .**
17. Expand the Advanced selection in the property grid.
18. Select **To zero** in the dropdown menu of the **Pruning** option
19. Select **Yes** in the dropdown menu of the **Subtotals** option.
20. Click Ok.
21. Run and select the parameters:
    - Scenario: 2055ACT – **2055 Actual**
    - Period: **12**
    - Geographical view nodes: **EU -Europe**
22. Compare the outcome with **Form_A010.xlsx** file

WORKSHOP 12 - Dynamicity: Ranking

Objective	To learn how to filter and sort a set of data in a dynamic matrix
Apply Ranking on a dynamic matrix	Perform the following tasks:

1. Create a copy of the form **A010 - Dynamicity: Pro tips**
2. Define the following attributes:
    - Code: **A011**
    - Description: **Dynamicity: Ranking**
3. The form must have the same outcome of the file **Form_A011.xlsx**, available in the Workshops > Output Reporting
4. Double click one cell of the matrix to open the Matrix
5. Access the matrix option and untick the **Don't repeat cloned headers on each row/column**
6. Select the row filter **X00 - Products by types**
7. Expand the property Advanced selection among property grid.
8. Set property **Pruning**, to **None** to deactivate it.
9. Set property **Subtotals**, to **No** to deactivate it.
10. Set selection **Insert lowest level**.
11. Click **Ranking** and expand the dropdown menu
12. Select the following options to set the ranking:
    - Selecting rule: **Top elements**
    - Sorting rule: **Descending**
    - Number of elements to display: **5**
    - Reference column: **1) $SCE_P - Scenario**
13. Click Ok twice
14. Run and select the parameters:

- Entity: **X02 - Northern Europe**
- Scenario: **2055ACT – 2055 Actual**
- Period: **12**

15. Compare the outcome with **Form_A011.xlsx** file

Need any help? Here are some hints

- Remember that Pruning and Subtotals are located under the Advanced selection in the property grid.

WORKSHOP 13 - Custom Tagetik style

Objective	To learn how to create and apply a custom layout to a form
Tasks	Perform the following tasks:

1. Create a copy of the form **A010 - Dynamicity: Pro tips**
2. Define the following attributes:
    - Code: **A012**
    - Description: **Custom Tagetik style**
3. The form must have the same outcome as the file **Form_A012.xlsx**, available in the Workshops > Output Reporting.
4. Access Tagetik style  on the CCH Tagetik ribbon bar
5. Select the standard style **TGK - Simple style**
6. Click copy 

and define the attributes:

   Code: **CUSTOM**

   Description: **Custom Tagetik style**
7. Save and select the new Tagetik style
8. Click Definition 

9. Click **New** to define a style
10. Set the Style name: **Percentage custom** .
11. Enable only **Number** and **Font**.
12. Click **Format**.
13. Access tab **Number** and select **Percentage**.
14. Access tab Font and select:
    - Font style: **Bold**
    - Font Color: **Red**
15. Click Ok twice

16. Select the style **Col_Header** and click **Edit**.
17. Click **Format**.
18. Access tab **Fill** and select:

    Background color: **Black** .
19. Click Ok twice
20. Access tab **Style to use**.
21. Select the folder **Formulas** below **Columns -> Only values** in the left pane.
22. Select the style **Percentage Custom** in the central pane
23. Add it in the right pane 
24. Click Ok and close the Tagetik style window.
25. Access Form options  on the Design ribbon bar.
26. Select Layout options and change the Tagetik style in **CUSTOM - Custom Tagetik style**
27. Click Ok.
28. Double click to open the Matrix.
29. Edit the formula on the column 3: **Variance**
30. Change the formula into ({1} - {2})/{2}
31. Click Ok.
32. Save the form.
33. Run and select the parameters:
    - Entity: **EU - Europe**
    - Scenario: **2055ACT – 2055 Actual**
    - Period: **12**
34. Compare the outcome with **Form_A012.xlsx** file and with the preview of the form before the running.

WORKSHOP 14 - Hyperlinks

Objective

- Learn how to create a form cockpit from which running different forms by hyperlinks
- Create hyperlinks in and out matrix cells

Hyperlinks from Excel: creation and run

Perform the following tasks:

1. Open Form **COCKPIT – Form Cockpit** under the folder OUT – Output.
2. Select cell **I11** (Displays the value 0001 - Profit & Loss).
3. Click Hyperlink  on Design ribbon bar.
4. Select the action **Open form**
5. Click  to add to the action list.
6. Select the form **0001 - Profit & Loss** below folder DE - Data entry.
7. Click Next, you will receive an error.
8. Click Ok twice.
9. Click Ok again to create the hyperlink
10. Create the hyperlinks in the related cells also for the other forms: **0003, 0005, 1000.**
11. Save the form.
12. Run the form **COCKPIT - Form** cockpit in navigation mode.
13. Select the following parameters:
    - Scenario: **2049ACT_T - 2049 Actual Training**
    - Entity: **A00 - Stark industries**
14. Click on the hyperlinks and check the behavior of the form run.

Hyperlink definition on Matrix	Perform the following tasks: 1. Open Form **001 – Profit & loss** in Design mode. 2. Open the matrix. 3. Select the first row. 4. Select **Hyperlink** property into Property grid. 5. Select Action list. 6. Select Open form among the available actions. 7. Select the form **0003 – Product Revenues by Area**. 8. Double click to open the matrix. 9. Click next, you will receive an error 10. Click Ok twice 11. Click Ok to create the hyperlink. 12. Save the form. 13. Run the Form **0001 - Profit & Loss i**n navigation mode and then in data entry mode. 14. Check the existence of the hyperlinks in the row headers and in the values. 15. Click the Hyperlink created on first row

WORKSHOP 15 - Simple SQL Query

Objective

- Learn how to create a normal query.
- Use Advanced cell fields to to create a parametric query. .

Tasks

Perform the following tasks:

1. Reach the end-user homepage with:
   - User: **EMPEROR**
   - Password: **tgk**
2. Click on the username on the top right of the window.
3. Click **Download**.
4. Select **Tagetik Data Model** and check how the Tagetik Data Model is organized on the displayed document.
5. Search for **DATI_CAMBIO** table and check the columns code and description.
6. Reach the excel interface.
7. Create now a new Form with:
   - Code: **A013**
   - Description: **Simple Query**
8. Click the New Query button 

9. Set up the query:
   - SELECT COD_VALUTA, COD_PERIODO, CAMBIO_MEDIO, CAMBIO_PERIODO, CAMBIO_FINALE FROM DATI_CAMBIO WHERE COD_SCENARIO = ${@$SCE_P.code} AND COD_VALUTA = ${@$VAL_P.code}
10. If you copy and paste the query, please pay attention to the spaces.

11. Click the tab Columns to customize the column names in the user's language
12. In the Layout options tab, tick:
    - Show Query Name
    - Show Header
    - Fit column width
13. Run the form and select different currencies to verify the different results.

WORKSHOP 16 - SmartInsight

Objective

To use the main features provided by the Smart Insight tool.

- Replicate a simple form
- Account dimension on the rows, Scenarios and Periods on the Columns, Entity dimension on the Filters Panel

Tasks

Perform the following tasks:

1. Reach the web end-user interface.
2. Click on the Smart Insight tile to open the feature.
3. Within the Excel-like web-page that opens up, click on CCH® Tagetik tab.
4. Enable both the Dimension Panel and the Filters Panel.
5. Select cell C7, and click on **New Matrix**
6. When asked which Dataset to select, choose the **000001 - Financial data** below **Economic details**
7.
8. Select and drag the **X00 - Products by types** node of product hierarchy on the rows.
9. Select and drag the twelve Periods on the columns.
10. Select and drag the Scenario **2055ACT_2055 Actual** on the columns.
11. Select and drag the Entity **A00 - Stark Industries** on the Filters panel
12. Select and drag the Account **50010 - Product revenues** on the Filters panel
13. Select and drag the **AMOUNT** on the Filters panel
14. Click the Refresh button 

15. Tick the option **Hide 0 columns**
16. Double click on the cell C8 **Products by types** and refresh to see the result.
17. Select from cell C9 to 012 .
18. Right Click -> Clear content.
19. Click Refresh 
20. Click the Lowest option 
21. Double click on the row and refresh to see the result
22. Delete the rows opened as recently done.
23. Click refresh 
24. Click All Descendants option 
25. Double click on the row **C8**
26. Click refresh  to see the result.
27. Delete the rows opened
28. Tick the option **Hide 0 rows**
29. Insert an Excel Formula SUM on the cell Q8 to calculate the sum of March, June, September and December **=SUM(F8:O8)**
30. Copy the cell in the entrire column of the matrix.
31. Hide the column **P** using Excel instruction
32. Add the header **Total** manually on cell Q7
33. Refresh.
34. Change the filter on Entity selecting the node EU - Europe of the hierarchy Geographical view.

35. Insert the currency **EUR -Euro** as Filter panel.
36. Click the button ⋮ in the filter panel next to Currency filter.
37. Set the on-the-fly conversation as **Based on account**.
38. Click Refresh 
39. Format properly the matrix as shown in the Excel form provided.
40. Select the entire matrix area and generate a Column Chart.
41. Click File on the ribbon bar to save the form as **TEST**.

Need any help? Here are some hints

- The Filters Panel works as a Matrix/Form filter. So far, only one matrix is admitted in Smart Insight
- While setting up the matrix, the refresh button appears next to the cell you have chosen to start with as a yellow icon
- When you drag a new Dimension element onto the Worksheet, drop it in onto the grey area:
    - You can nest one element under the other, just by using the Drag and Drop feature
    - Drag before the Period dimension on the columns
- The Smart Insight tool does not come up with System or Custom Parameter. Just use the fixed elements or nodes instead

Need some help?

Here you can find the solutions to the most frequent

technical issues you may get stuck with during the course.

I can't login to the training environment

Make sure you are using the access link provided by the trainer (with the proper 4 digits token if needed!). Events have a starting and ending date/time.

Make sure you are not trying to access the training course too early or too late!

My machine is slow

- Keep in mind that lab configuration may require up to 20 minutes to start from the moment you click on the CCH Tagetik Chrome icon! 

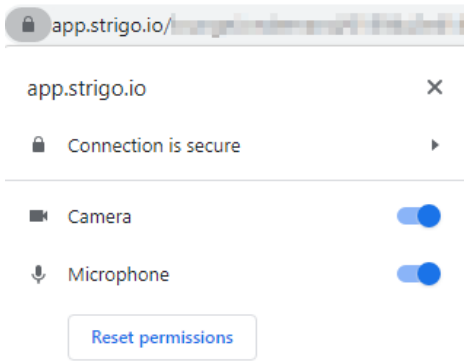

- The local connection's bandwidth is not sufficient for the number of connections currently in place (performance issues on the server side are very rare).

  Solution: ask the IT services to reboot the access point and prefer connection via cable if available.

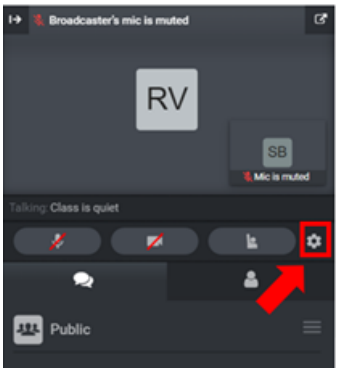

Audio/Video Troubleshooting

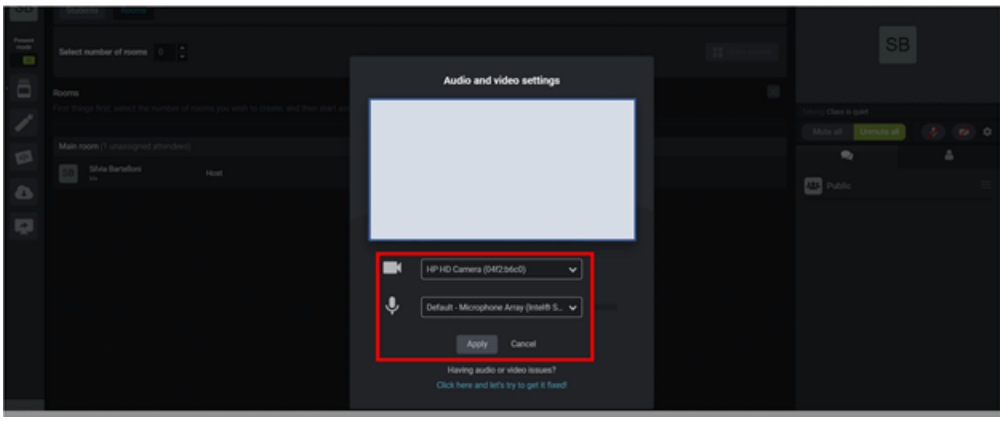

In case you are having problems with audio and video try the following:

1. Make sure you are running a compatible browser (Google Chrome, Mozilla Firefox).
2. Make sure your media devices are connected and are not muted or set to very low volume.
3. Make sure the browser you are in is allowed to use your laptop audio and video

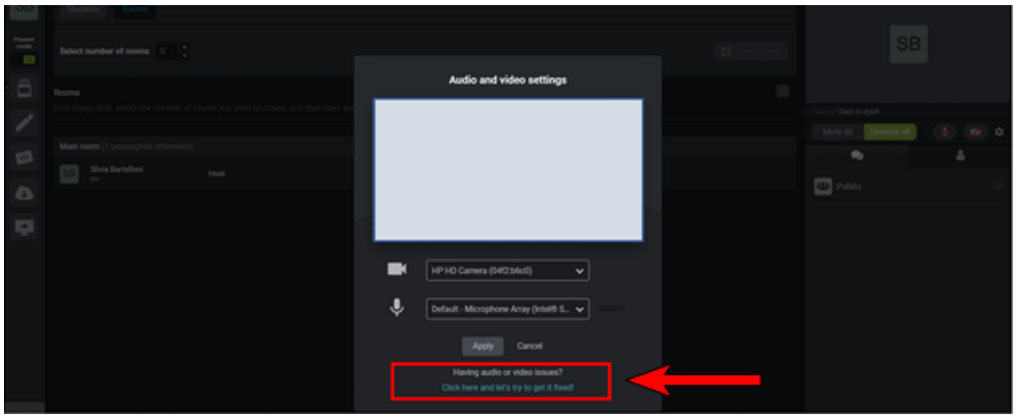

4. Make sure no other applications are running that use your media devices (microphone, camera or speakers).
5. Prevent any ad-blockers or script blockers running on the classroom's tab.
6. Refresh the page.
7. From the right communication panel, click on the settings icon and change the camera/video options selected

Check if there are any errors: if so, they will appear in red.

In addition, you can run a troubleshoot by clicking on: "Let's try and get it fixed" and then on "Run Troubleshoot"

If you still have problems, it could depend on network restrictions.

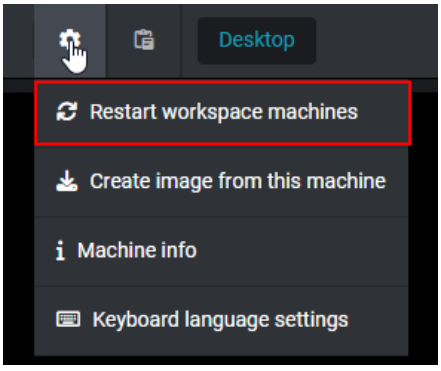

Resolution issues: if you see CCH Tagetik application masks too big in the machine even if I didn't change browser zoom.
Remember, Strigo adapts the machine to your computer resolution. Try to change your resolution or use a different monitor!

⚠ Important: Scaling setting recommended = 100% (max 125%).

Lab troubleshooting while practicing

If you are in your Virtual Machine and you are experiencing a black screen with your lab not starting:

1. Try restarting the machine by clicking on the wheel icon and then on "Restart workspace machine"

2. Try logging out and then log in again after few minutes

⚠ Important:

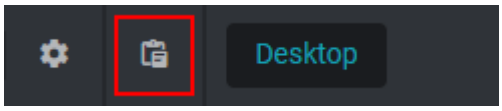

Your machine will be rebooted, but do not panic! No data will be lost. You will need to wait for the OS to restart and CCH® Tagetik to be reloaded though.

3. A pause > restart of the lab should work as well. The pause option is on the top right-hand corner of the screen. The workspace will switch to **Paused** mode, and then you want to really just give it around two minutes. This is usually enough time to let the lab machine be actually stopped, before you go and hit **Resume** again.
4. Try to open the browser in incognito/private mode.
5. Reach out to Strigo support through this link and then click start live chat

I can't copy/paste any content to the virtual machine

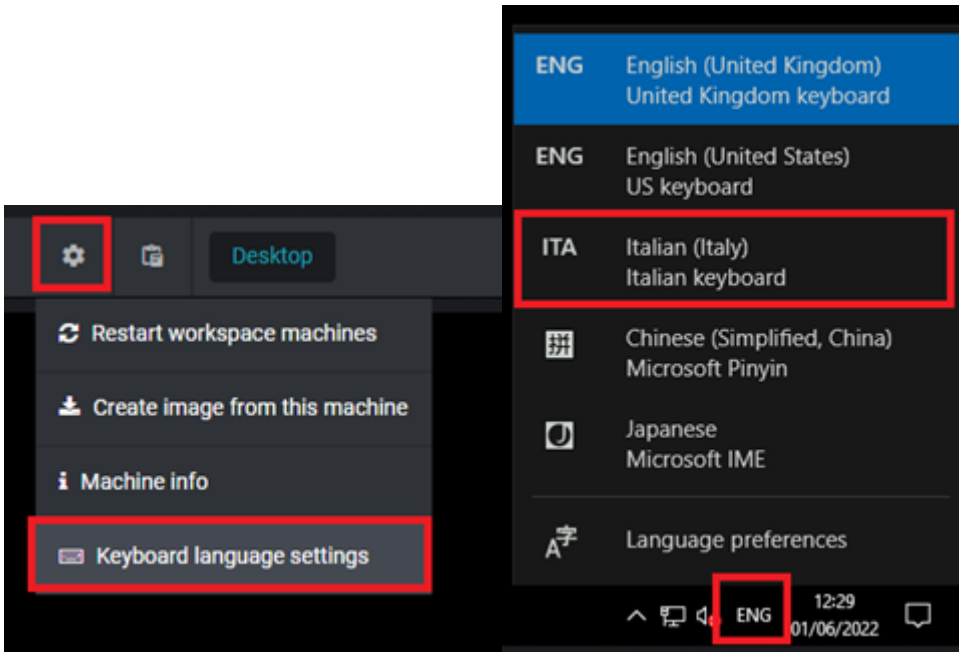

Direct copy/paste is not allowed.

Solution: Use the clipboard icon to copy and paste from the desktop to the virtual machine and viceversa.

I cannot change language in my machine

Solution: Change the language both by desktop bar and by Settings.

MS Excel: I can't select a given form or an object of a form.

This issue happens pretty often and is due to some wizard (e.g. Matrix Wizard, Cell Fields wizard) already open but not currently diplayed on the screen. **When any wizard is open and running, you can't work anywhere else**.

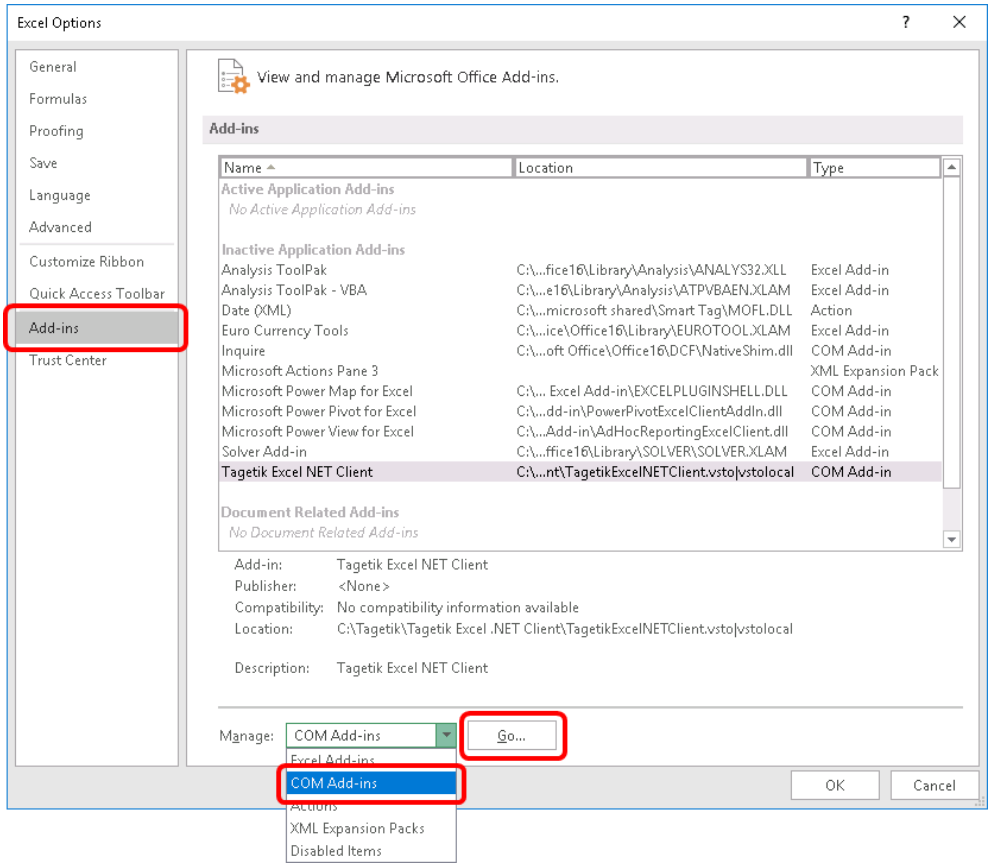

Solution: check if you have any of the wizard open and running (most common: Matrix Wizard, Tab Filters, Form Filters, Cell Fields wizards). If this is the case, be sure to have finished your work on that wizard and close it with OK to confirm. Then go on with your work.

MS Excel: the Tagetik menu is no longer available on the ribbon bar.

Solution1: this probably means the CCH Tagetik add-in has been disabled by MS Excel due to a crash or some errors and has to be enabled again.

Follow the path **File > Options**. Click "**Add-Ins**" on the "**Excel Options**" pane and expand the drop-down menu "**Manage**" on the bottom. Try to select:

1. "**COM Add-Ins**" > "**Go...**". If unticked, tick the "**Tagetik Excel NET Client**" Add-in and click OK
2. "**Disabled items**" > "**Go...**". If you find there the "**Tagetik Excel NET Client**" Add-in, enable it. Close and start Excel.

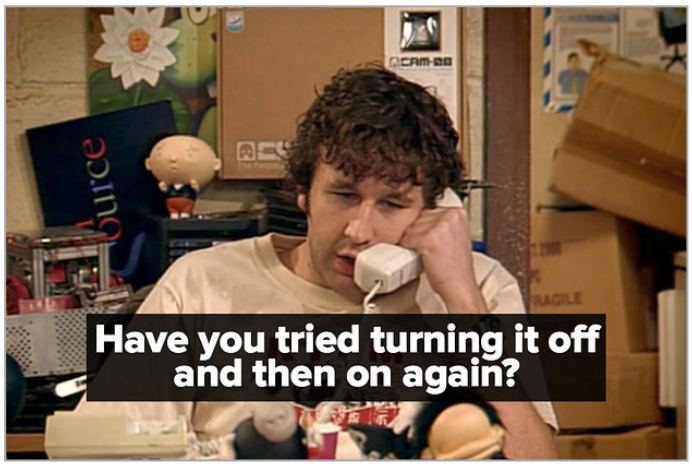

Solution2: should solution1 not solve the issue, disinstall and reinstall the CCH® Tagetik add-in. Ask the trainer for some help in case.

If you use a 4K resolution monitor, there's a chance you will see far too little

Solution: Low the resolution before the training, then set it back to the original value after the training

My problem is not listed here.

If even this can't solve your problem, please refer to your trainer (and if you are a trainer to your training manager).
