EXERCISE 1: Single User creation

Objective	To perform all the activities necessary for setting up a single user in the application so that the user can enter the application and access one business database.

Tasks

Perform the following tasks:

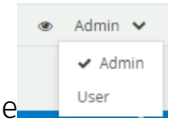

1. Login with the User
    - User: **$USER**
    - Password: **$PASS**
2. Define a New Password if you must. E.g., **tgk**
3. Choose the **Repository** Database, within the Admin View
4. Select the **Users and Roles** tile from the home screen.
5. Select **Users** item from the drop-down menu.
6. Select **Add** from the top left section of the screen to add a new user:
7. Enter the following information in the fields on the right side of the screen.
    - **Attributes** Tab
        - Code: **STUDENT**
        - Description: **Tagetik student**
        - User type: **Local User**
        - Fill in all the required language-related fields.
    - **Security** Tab
        - Leave defaults.
        - Use the default password rule, e.g., $PWD.
          📘 **Note:** The default password rule is very basic and should only be used for testing purposes.

8. Save the new user profile.
9. Within the user screen, select the **Actions** menu (the three dots menu) and select the User Roles Mapping.
10. Assign the $**Sysadmin** role to the Repository Database and the $**ALL** role to the Application Database: **TRAINNG_DB_011 – Academy**
    - **Attributes** Tab
        - Database: **[!] - Repository**
        - Role: **$SYSADMIN**
        - Locked temporarily: **unhook**
        - Restriction on the Application DB: Unrestricted

          ⚠ **Important:** make sure to leave the user unlocked on the database or they will not be able to access it.
11. Login now with the newly created user Student. You should be able to view and access the database(s) associated with it.

Need any help? Here some hints

- You need to switch from the user to the admin view before the Repository DB is visible 

- To access the Users creation screen, from the Repository DB, select **Users > Roles > Users**
    - In order to add a new user, you will need to click on the ⊕ icon.
    - To add details, the user details fields are on the right.
    - Select the password rule from the Security tab.

- To test your new user, you will need to exit the application.
    - In the login screen, type in your new username. Leave the password field blank and hit return. The application will ask you for a new password.

EXERCISE 2: Create a Custom Role – change Function

Objective

To utilize the custom role creation capability within the application.

Tasks

Perform the following tasks:

1. From the Repository homepage, select the **Users & Roles** tile.
2. Select the **Custom Roles** entry from the drop-down menu.
3. Select the Add button from the screen menu.
4. Fill in the **Attributes** fields.
    - Code: CUSTOM
    - Description: Custom Role
5. Save the new role.
6. Select the new role and select the Action menu (three vertical dots) from the icon bar at the top of the Custom Roles screen.
7. Select **Enable** functions from the Actions drop-down menu.
8. Add a new Element and search for the Module/Function: **0002306 – Query Analyzer** (restricted)
9. Save.
10. Assign the New Custom Role to your Student User at the application Database: Database: **TRAINNG_DB_011 – Academy**

Need any help? Here some hints

- You can assign the new Custom Role to your User in the User/Roles mapping options or again in the Users tile (see Exercise 1)

EXERCISE 3: License Information

Objective

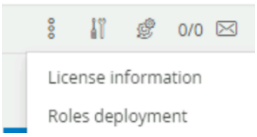

To understand what the license regulates within the application, e.g., the number of users, the modules that are available to the customer, etc.

Tasks

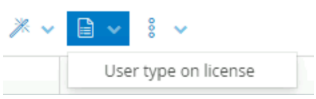

Perform the following tasks:

1. Open the license Information in your **Repository** settings
2. Check the licenses installed, currently
3. Open the **Users & Roles** tile
4. Create a **User type** on the License Report
5. Run the **Report**
6. Examine the results

Need any help? Here some hints

- 

License information can be found in the action menu item License
- **Role Deployment** can also be found in the action menu. Role deployment is needed if you purchase extra Tagetik modules or additional users
- The "**user type on license**" report screen is launched from the Reports button found next to the Actions button in the Repository > Users & Roles screen.
- Exporting the report does not include the summary at the top of the screen.

EXERCISE 4: Database Reporting

Objective	To analyze Database reports and Database table structures

Tasks

Perform the following tasks:

1. Click the Databases tile
2. Choose the **TRAINING_DB_011** and download the **Data report in the database**
3. Analyze the downloaded report

   - What is the number of total rows for all Data tables?

   - How many rows have the "Utente" table

Need any help? Here are some hints

- The Databases tile is on the Repository Webpage
- The Data report can be found in the actions menu
- The Report is stored in the Download Folder
- The Report contains separated tables for Data tables, Offline data tables, Tables of processes, Other tables
- Use Excel tools to analyze the file
- the table called "UTENTE" is within the "Other tables" tab

EXERCISE 5: Database export/import tool

Objective

To become familiar with the built-in import and export tool and its usage.

Tasks

Perform the following tasks:

1. Access the **Repository**.
2. Select the **Import/Export tile** from the homepage.
3. Select the **Export entry** from the drop-down menu.
4. In the **Export Tool** screen, select the **Repository** from the Database field.
5. In the **Tables to export** field, deselect all items except the logs group of tables.
6. Select the **Run** button.
7. **Download** the exported file.
8. Open the zipped exported file and read the **export.log file**. How many rows were processed for the REP_ AUDIT_LOGS table?
9. Return to the home page.
10. Select the **Import/Export tile**.
11. Select the **Import** option
12. Upload the previously downloaded file in the **Repository** Database

Need any help? Here are some hints

- to export tables:
  - From the Repository, click on the Import/Export tile
  - Select Export.
  - Select the Repository DB.

- Export all the logs
- Select "manage exported files" and Download the last export

Downloaded files occur within the Download Folder in the File Explorer

EXERCISE 6: Master Data Management

Objective

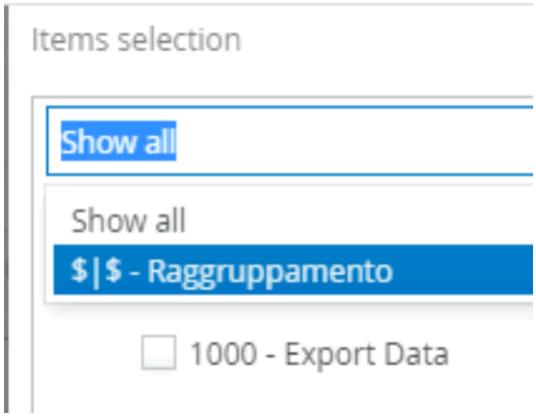

To become familiar with the MDM tool and how to copy Metadata from DB to DB

Perform the following tasks:

1. Assign to your Student user the Database **TRAINING_DB_003 – Budget Pro** with **$ALL** Admin rights
2. Navigate to the **Master Data Management** tile
3. Create a **New Routine**
   - Code: 100
   - Description: Account Load
   - Type: **DB to DB**
   - Source DB: **TRAINING_DB_011 - Academy**
   - Target DB: **TRAINING_DB_003 – Budget Pro**
   - Tick the option: **Automatically include the required tables**
4. Select the **Details** from the Action drop-down Menu
5. Create a New Detail
   - Action: **Include**
   - Table: **$ CONTO Account – Table (CONTO)**
6. Save the Detail
7. Navigate back to the **Master Data Management** tile and run an import routine
8. Run the **Routine** formerly created
9. Check the **Changes** by clicking on the Information Button.
10. Hook the routine and push the button Apply the result

Need any help? Here some hints

- If the Budget Pro Application doesn't appear in the Drop Down Menu, logout and re-login
- To create a routine, click on the **Routines** List
- Before you can **choose a routine**, choose Show all in the Drop-Down List

EXERCISE 7: Audit tool

Objective	To become familiar with the Audit tool and how to locate information within the tool regarding events that have occurred in the application

Tasks

Perform the following tasks:

1. In this workshop, you will need to create a login error, for example:
    - Mistype a user password or
    - Try using a misspelled username.
    - Either log out and log in or just log in with one of the above errors.
2. Re-enter (correctly) the application with a user who has access to the Repository. For example, by using STUDENT user from Exercise 1.
3. Search the Audit log for the login error message. In particular:
    - verify how to display the error message
    - verify how to display the stack trace of the error.
4. Optional Task: Look for the export or import activities from the previous workshop.
    - Find out how much time the export processing took.

Need any help? Here some hints

- To access the Audit tool, from the Repository DB click on the Audit tile:
    - To see the details of an entry in the Audit log, you need to:
        - Select the row of the event

- Go to the actions menu 
- Select details.

- In order to see the length of time of the event, you need to:
  - Select the **event**
  - Look at the **Length** column
  - **Durations** are also available in the Details windows in the Statistics Tabs.

EXERCISE 8: Scheduler and MDM import

Objective

To become familiar with the Scheduler and its configuration and usage. We will schedule the routine created in Exercise 6

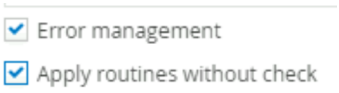

Tasks

Perform the following tasks:

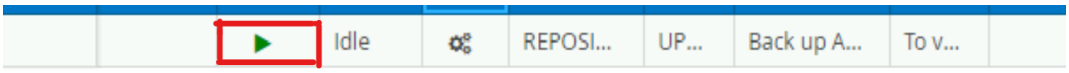

1. Run the **MDM** Import Routine created in **Exercise 6** Export Data
2. Hook the option Apply Routines without a Check
3. Click the **Schedule** Button
   - Description: **Backup Account**
   - Minutes: **00**
   - Hours: **17**
4. Finish the Scheduling by clicking the **Schedule** Button
5. **Open** the Scheduling tile
6. **Start** your Scheduled Routine

Need any help? Here some hints

- Before you can push the Schedule Button you need to **Hook** Apply Routines without a Check

- You can start your Routine in the Scheduler by pushing the green arrow

EXERCISE 9: Query Analyzer – Do it on the application

Objective	To use the query analyzer and become familiar with its usage.

Tasks

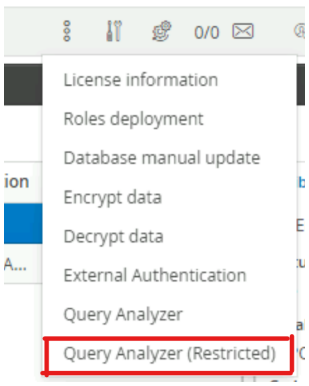

In this exercise, you will need to use a custom role with the activated **0002306 Query Analyzer** (restricted) function

Perform the following tasks:

1. Login using **STUDENT** user.
2. Switch to Application Database - **Academy Consolidation**
3. Access the Query Analyzer (restricted) from the action menu . Then,
    - Query the Application for the contents of the **CONTO** table.
    - Query the application for the contents of the **DATI_SALDI_LORDI** table.
    - Export the result as a zip folder
3. Optional task: **Query** the Repository for a list of ALL tables in the Repository.

Need any help? Here some hints

- The **Query Analyzer** can be found in the action menu:

- Some useful tables name:
    - **CONTO** = Account table
    - **DATI_SALDI_LORDI** = Gross Amount
    - **AZIENDA** = Entity table
- Important: The **DBMS** used in your application may affect the queries (for example the TUP and the training application utilize PostgreSQL).
- The SQL code is:
    - Select * from CONTO
    - Select * from DATI_SALDI_LORDI
- If you are really stumped. The tables query is the following in PostgreSQL.
    - SELECT table_name FROM information_ schema.tables WHERE table_schema='public'
- In MS SQL server:
    - SELECT table_name FROM information_ schema.tables WHERE table_schema='dbo'

Need some help?

Here you can find the solutions to the most frequent

technical issues you may get stuck with during the course.

I can't login to the training environment

Make sure you are using the access link provided by the trainer (with the proper 4 digits token if needed!). Events have a starting and ending date/time.

Make sure you are not trying to access the training course too early or too late!

My machine is slow

- Keep in mind that lab configuration may require up to 20 minutes to start from the moment you click on the CCH Tagetik Chrome icon! 

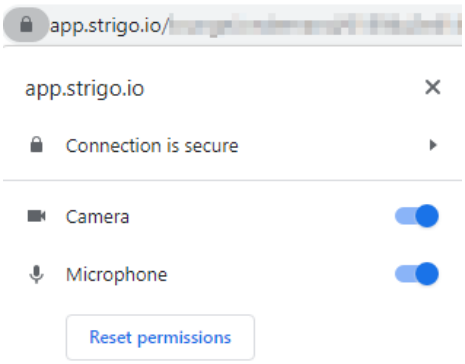

- The local connection's bandwidth is not sufficient for the number of connections currently in place (performance issues on the server side are very rare).

  Solution: ask the IT services to reboot the access point and prefer connection via cable if available.

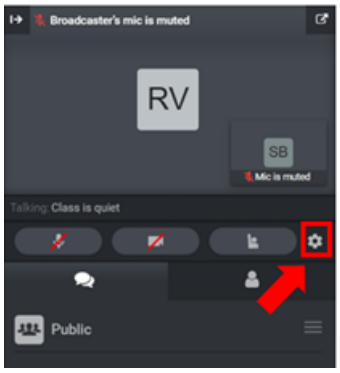

Audio/Video Troubleshooting

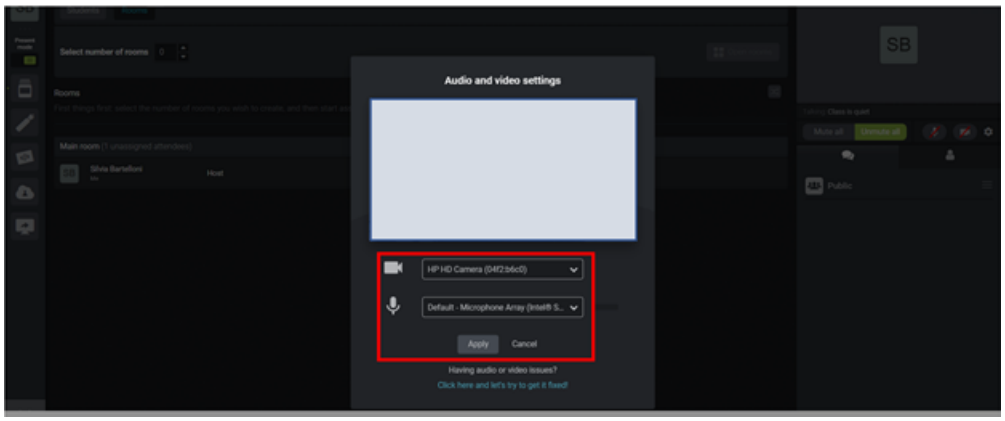

In case you are having problems with audio and video try the following:

1. Make sure you are running a compatible browser (Google Chrome, Mozilla Firefox).
2. Make sure your media devices are connected and are not muted or set to very low volume.
3. Make sure the browser you are in is allowed to use your laptop audio and video

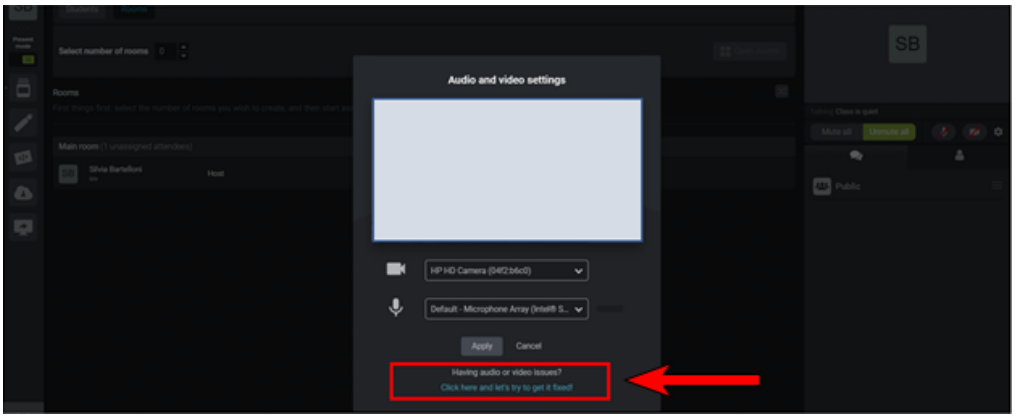

4. Make sure no other applications are running that use your media devices (microphone, camera or speakers).
5. Prevent any ad-blockers or script blockers running on the classroom's tab.
6. Refresh the page.
7. From the right communication panel, click on the settings icon and change the camera/video options selected

Check if there are any errors: if so, they will appear in red.

In addition, you can run a troubleshoot by clicking on: "Let's try and get it fixed" and then on "Run Troubleshoot"

If you still have problems, it could depend on network restrictions.

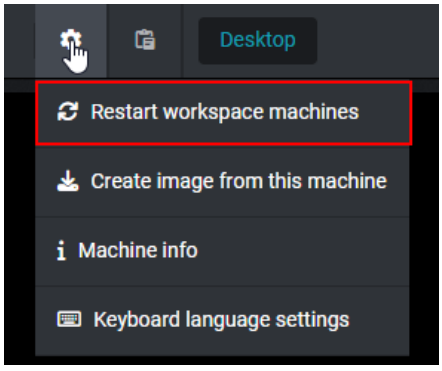

Resolution issues: if you see CCH Tagetik application masks too big in the machine even if I didn't change browser zoom.
Remember, Strigo adapts the machine to your computer resolution. Try to change your resolution or use a different monitor!

⚠ Important: Scaling setting recommended = 100% (max 125%).

Lab troubleshooting while practicing

If you are in your Virtual Machine and you are experiencing a black screen with your lab not starting:

1. Try restarting the machine by clicking on the wheel icon and then on "Restart workspace machine"

2. Try logging out and then log in again after few minutes

⚠ Important:

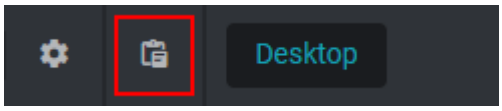

Your machine will be rebooted, but do not panic! No data will be lost. You will need to wait for the OS to restart and CCH® Tagetik to be reloaded though.

3. A pause > restart of the lab should work as well. The pause option is on the top right-hand corner of the screen. The workspace will switch to **Paused** mode, and then you want to really just give it around two minutes. This is usually enough time to let the lab machine be actually stopped, before you go and hit **Resume** again.
4. Try to open the browser in incognito/private mode.
5. Reach out to Strigo support through this link and then click start live chat

I can't copy/paste any content to the virtual machine

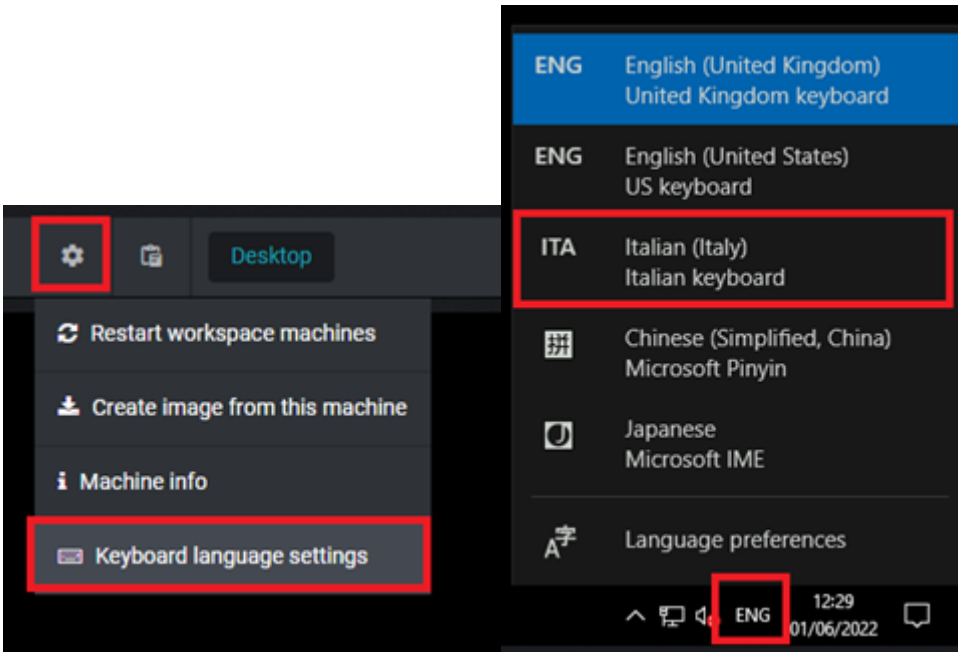

Direct copy/paste is not allowed.

Solution: Use the clipboard icon to copy and paste from the desktop to the virtual machine and viceversa.

I cannot change language in my machine

Solution: Change the language both by desktop bar and by Settings.

MS Excel: I can't select a given form or an object of a form.

This issue happens pretty often and is due to some wizard (e.g. Matrix Wizard, Cell Fields wizard) already open but not currently diplayed on the screen. **When any wizard is open and running, you can't work anywhere else**.

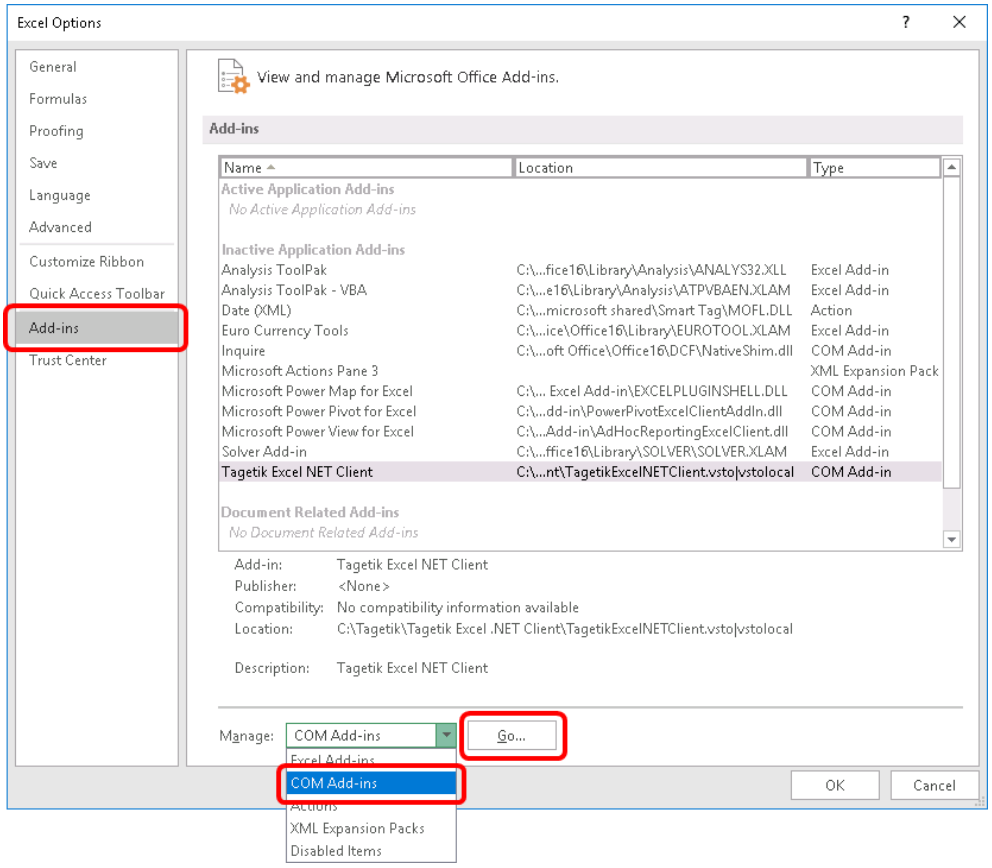

Solution: check if you have any of the wizard open and running (most common: Matrix Wizard, Tab Filters, Form Filters, Cell Fields wizards). If this is the case, be sure to have finished your work on that wizard and close it with OK to confirm. Then go on with your work.

MS Excel: the Tagetik menu is no longer available on the ribbon bar.

Solution1: this probably means the CCH Tagetik add-in has been disabled by MS Excel due to a crash or some errors and has to be enabled again.

Follow the path **File > Options**. Click "**Add-Ins**" on the "**Excel Options**" pane and expand the drop-down menu "**Manage**" on the bottom. Try to select:

1. "**COM Add-Ins**" > "**Go...**". If unticked, tick the "**Tagetik Excel NET Client**" Add-in and click OK
2. "**Disabled items**" > "**Go...**". If you find there the "**Tagetik Excel NET Client**" Add-in, enable it. Close and start Excel.

Solution2: should solution1 not solve the issue, disinstall and reinstall the CCH® Tagetik add-in. Ask the trainer for some help in case.

If you use a 4K resolution monitor, there's a chance you will see far too little

Solution: Low the resolution before the training, then set it back to the original value after the training

My problem is not listed here.

If even this can't solve your problem, please refer to your trainer (and if you are a trainer to your training manager).
