Bulletin 0073

Audit Data Migration utility only available for launch through API starting from Service Pack 34

Audit Data Migration utility no longer available in CCH Tagetik Web interface starting from Service Pack 34

September 11, 2025

Issue Details

Starting from CCH Tagetik Service Pack 18* (generally available from November 12, 2021), the method for saving audit data was changed, which required the migration from the old format to a new format to enhance audit performance. A dedicated utility – the Audit Data Migration utility – was provided to facilitate this migration.

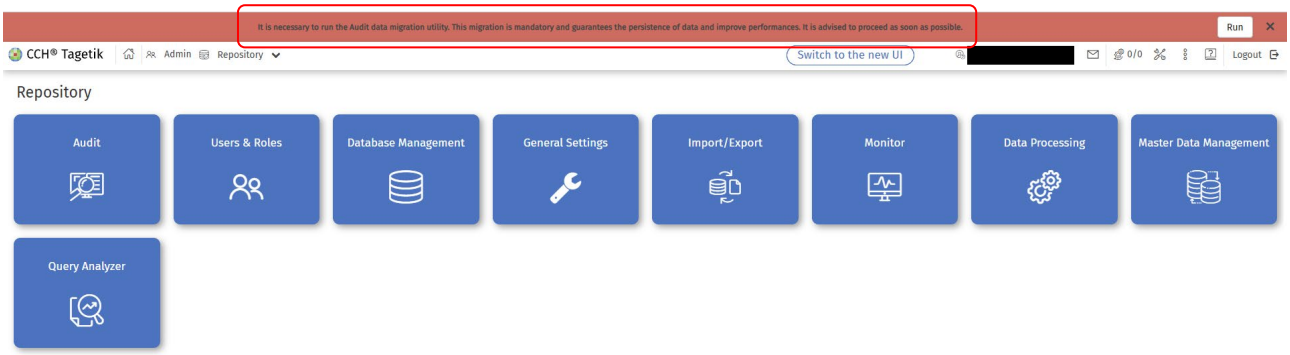

Starting from Service Pack 34 (generally available from November 7, 2025), the Audit Data Migration utility will no longer be accessible via the CCH Tagetik web interface (i.e., legacy UI**) and will only be launched through API.

Impact

Service Pack 33 (generally available from August 1, 2025) is therefore the last release where users can run the utility via the web interface.

After Service Pack 33, the migration will have to be launched through the API. Please note that cloud customers can launch APIs using the Intelligent Platform Standard license, and this does not determine an increase in fees.

Users connected to the old UI who have not yet migrated their audit data will see a banner prompting them to proceed with the migration of their audit data, as illustrated in the image below:
