

Consolidation Advanced

This training course covers 4 of the most common topics of a standard Statutory consolidation project, such as Restatement and management of advanced event in the Ownership Structure resgister, and provides guidelines and best practices on how to approach to them.

Software version: 5.3.SP28

Last update: 6/21/2024

Table of contents

EXERCISE 1 - First Consolidation simulation - Analysis 4

EXERCISE 2 - First Consolidation simulation - Override Historical FX rates 6

EXERCISE 3 - Financial Investment elimination journal and FX rate loading 9

EXERCISE 4 - Data analysis 14

EXERCISE 5 - Most Common events 1 - Additional automatic effects 16

EXERCISE 6 - Most Common Events 2 - Entity's life analysis 20

EXERCISE 7 - Most Common events 3 - Deconsolidation – out of the group 23

EXERCISE 8 - Consolidation scenario vs Segment Reporting 27

Need some help? 30

EXERCISE 1 - First Consolidation simulation - Analysis

Objective	Simulate 2 activities of First consolidation starting from the customer raw files
Data extraction analysis	1. In your machine, look for the **Consolidation Pro Exercises** folder 2. Inside it, open the excel file **1_First_Consolidation_EX_1_Task1_Project** 3. The task is to simulate analysis usually done in a real-life project 4. This file contains 2 Sheets: • information = **orange** sheet • working sheet = **blue** sheet 5. In the first sheet "Instructions", read carefully the activities to perform 6. Use the blue sheets for analysis and to write down your solutions.
Historical FX rates analysis	1. In your machine, look for the **Consolidation Pro Exercises** folder 2. Inside it, open the excel file **1_First_Consolidation_EX_1_Task2_Historical** 3. The task is to simulate activities usually done in a real-life project 4. This file contains 2 sheets: • information = **orange** sheet • working sheet = **blue** sheet 5. In the first sheet **Instructions,** read carefully all the activities to perform 6. Go to the blue sheet **Net Equity** to do the activities. Read the instructions, have a look at the data and then do the following points. 7. In the sheet **Net Equity**, you can see the information about Net Equity from Trial Balance ($AMOUNT) of entity A01, in Local currency (CAD) and in Consolidation currency (EUR)

8. Calculate the necessary Historical FX rates (in column G) for Share Capital and Other Reserves to obtain the expected converted Historical value (column D)
    - To calculate the Historical FX rate, e.g. for Share Capital, divide the Share Capital value in Local currency (CAD) in column C and the Share Capital value in Consolidation currency (EUR) in column D. Do that for Share Capital and Other reserves.
9. To calculate the FX rate difference/Translation reserve/CTA, sum up all the FX rate differences coming from all the Net Equity reserves: Share Capital, Other Reserves and Net Result.
    - To calculate the FX rate difference for each reserve column K), make the mathematical subtraction between:
        - the Net Equity value in Local currency (column C) divided for Final FX rate (cell C33).

          You can leverage column J to make this division.
        - the Net Equity value in Consolidation currency (column D)

    Example on Share Capital:

    - Conversion at Final FX rate = -143,820/1.64 = -87,695
    - Impact on Translation reserve = -87,695 - (-88,233.13)= 538

Need any help? Here are some hints

- In the Customer excel file, "Other reserves" value is split on more lines . To obtain the Overridden FX rate to apply, you can sum up all the values in Local and Consolidation Currency

EXERCISE 2 - First Consolidation simulation - Override Historical FX rates

Objective	How to override Historical FX rates manually in Trial balance.
Override Historical FX rates	1. Go to the application, log in using • User: XAVIER • Password: X 2. in the User homepage, select the tile **Overridden FX rates in memory data** and filter for: • Process: CONS2049_T • Scenario: 2049ACT_T • Period: 12 3. Add 2 additional rows in the mask for each Overridden FX rate calculated in the previous exercise. It means 2 rows for Share capital and 2 rows for Other reserves. The rows for Share Capital contain: • Entity: A01 • Account: 20310-320 (**generic variation account for Share Capital used in Trial Balance**) • Category: $AMOUNT • Currency: CAD or EUR • FX rate: 1.63 (CAD) or 1 (EUR) The rows for Other Reserves contain: • Entity: A01 • Account: 20320-320 (**generic variation account for Other Reserves used in Trial Balance**) • Category: $AMOUNT • Currency: CAD or EUR • FX rate: 1.625 (CAD) or 1 (EUR) Save.

4. Go to the User Homepage, click on the tile **2049ACT_T - Consolidator Cockpit.**
    - Select all the nodes
    - Click on Consolidation data processing/Custom.
    - Select from  all the listed Consolidation scenarios/periods
    - Click on Run button

    Please note: in CCH Tagetik we have different data processing (Entity, Group and Consolidation Area)

    - At the end of data processing you receive the Data processing log mask. Click on Close button.
5. Check the impact of the Overridden FX rates. Go to User homepage and select the tile **System reports** and then **Gross and IC amounts/Consolidated amounts**
6. Filter the Consolidated amounts for the following parameters:
    - Consolidation scenario: 2049CONS_T
    - Period: 12
    - Entity: A01
    - Account: starts with 203
    - Amount type: Consolidable
7. Analyse the value you obtained for each Net Equity reserve (Accounts 20310% and 20320%) and for the FX rate difference reserve (Account 20330%) of entity A01. Compare with the calculation done in excel file ("1_ First_Consolidation_EX_1_Task2_Historical") in the previous exercise.
8. Please note:
    - column **Notes** for the accounts 20330% (FX rate difference reserve): it is possible to understand from which Net Equity reserve each FX rate difference comes (including BS Year result; account 20350%)

- column **Method** (usually hidden): it indicates the conversion type/method applied on each account by the system

EXERCISE 3 - Financial Investment elimination journal and FX rate loading

Objective	Learn how the Financial Investment elimination from Ownership structure register and the FX rate loading work.

Ownership structure register

1. Go to the application, log in using:
   - User: **XAVIER**
   - Password: **X**
2. The elimination journal is created starting from the Ownership structure register. Go to the User homepage and click on the tile **Ownership structure register** selecting:
   - Process: CONS2049_T
3. Filter for:
   - Owner entity: C04
   - Owned entity: C05

   The system shows you the Event number=10
4. Please note the information inserted on the header:
   - Owner and Owned entity codes and currencies
   - the direct ownership %
   - the Event date: 24/09/2049 (the First Consolidation is in 2049)
   - the Event Type
5. Go to  and click on **Event data**
6. Go to the tab **Financial Investments** tab and note that we use the Financial Investments variation account
7. Go to the tab **Net Equity** and insert 2 rows using Net Equity **variation** accounts (to leverage the advantages to use a variation account in First Consolidation).

   One line for Share Capital:

   - Category: $AMOUNT
   - Account: 20310-320 (generic variation account for Share Capital **used also in Trial Balance**)
   - Cost Centers: GEN_CC
   - Products: GEN_P
   - Amount: -200.000

   One line for Other Reserves:

   - Category: $AMOUNT

- Account: 20320-320 (generic variation account for Other Reserves **used also in Trial Balance**)
- Cost Centers: GEN_CC
- Products: GEN_P
- Amount: -100.000

Save

8. Go to the tab **Generic FX rates** in which you can find the Generic FX rates for the Event (already filled in, you don't have to do anything)
9. Go to the tab **Account Specific FX rates** and insert the specific FX rates for Share Capital and Other Reserves on variation accounts.For Share Capital insert 2 lines (one with EUR and one with GBP):
   - Account: 20310-320
   - Cost Center: GEN_CC
   - Products: GEN_P
   - Currency: EUR or GBP
   - FX rate: 1 (EUR) or 1.25 (GBP)

   For Other Reserves insert 2 lines (one with EUR and one with GBP):
   - Account: 20320-320
   - Cost Center: GEN_CC
   - Products: GEN_P
   - Currency: EUR or GBP
   - FX rate: 1 (EUR) or 1.3 (GBP)

   Save and close the mask.

FX Loading Rates	1. Go to the Admin homepage and click on the tile **Processes** and select CONS2049_T, click on  and Process definition. 2. Go to the section on the right **Data Processing** and open the data processing tree: Consolidation/Basic Consolidation/Generate Contribution 3. Click on the button Blocked  and enable **Use FX rates from Ownership structure register**. Lock again the changes clicking on the button Unlocked 

4. Go to the Override Rules button  related to **Generated Converted** and check that the menu **FX rate loading mode** is already set on *Amounts, Entity journals and Financial Investments elimination/Net Equity*
5. Go back to the User homepage.
    - Click on the tile **2049ACT_T - Consolidator Cockpit**
    - Select all the nodes
    - On the right, click on the action Consolidation data processing/Custom
    - Click on button  and select the proposed Consolidation scenario/period and click on **Run** button
    - Close Data processing log mask
6. Go to the User homepage and click on the tile **Overridden FX rates in-memory data** filtering for:
    - Process: CONS2049_T
    - Scenario: 2049ACT_T
    - Period: 12
7. Filter then for:
    - Entity: C05
    - Account: starts with 203
8. Check the **Overridden FX rates** created for entity C05 on Net Equity:
    - The overridden FX rates with category **FI** (Financial Investment elimination) reflect the FX rates inserted in the Ownership structure register:
        - Share Capital = 1.25 GBP
        - Other reserves = 1.3 GBP

- The overridden FX rates **without** category (applied to Amounts and Entity journals) reflect the FX rates inserted in the Ownership structure register only on Other Reserves :
    - Share Capital = **1.228** GBP
    - Other reserves = 1.3 GBP

The system calculates a **weighted average FX rate** on Share Capital Amounts ($AMOUNT).

9. Run the report **WEIGH_FX_RATE** in the folder OUT/FC to see the explanation of the calculation done by the system. Select the following parameters:
    - Consolidation Scenario: 2049CONS_T
    - Period: 12
    - Actual view: C05 (in node B)
10. In the tab **NE**, you can see the FX rates applied on each reserve on Amounts and the FX rates set in Ownership structure register (OSR).

    In the tab **Weigh. FX rate**, you can see the calculation applied by the system:
    - The OSR FX rate for Share Capital is applied on 200.000 (same value present in OSR)
    - On the DELTA (210.000-200.000=10.000) the system applies the conversion type of the variation account (in this case, Average FX rate)
    - The FX rate applied at the end is the result of this mix

Financial Investments Elimination Journals	1. Go to the User Homepage and click on tile **System Reports** and then **Journals/Consolidation journals – Headers**. 2. Select the following parameters: • Scenario = 2049ACT_T • Period = 12

- Entity 1= C04
- Entity 2 = C05
- Category = FI

Then click on Original and consolidated rows from Actions button  . Select the Consolidation scenario = 2049CONS_T.

3. Analyse the Elimination journal:
    - Financial investments and Net equity on Original Amount type are eliminated:
        - Financial investments totally
        - Net Equity for 80% (Ownership %)
    -
    - Account Specific FX rates are applied on Net Equity accounts and on Consolidable amount type you can see:
        - Share Capital= 128.000 (applied FX rate=1.25 GBP as result of 160.000/1.25)
        - Other Reserves = 61.538 (applied FX rate=1.3 GBP as result of 80.000/1.3)
        - FX rate difference reserve = 45.913 + 25.419 (as result of the difference between the conversion at Final FX rate, that is 0.92 for GBP, and the conversion at Specific FX rates)

EXERCISE 4 - Data analysis

Objective	Simulate the data analysis starting from a customer issue
Data Analysis	1. Go to the application, log in using • User: **XAVIER** • Password: **X** 2. In Consolidation Pro Exercises folder, open the file **1_ First Consolidation_EX_4_Data Analysis** 3. The aim is to solve the customer issue. Customer communicates the Minorities result is not correct (orange cell Y55 in sheet BS). **What is the reason of discrepancy between expected and obtained minorities?** 4. The scenario 5. To check Minorities you can use the report **MIN** (folder OUT/FC) run for: 6. • Consolidation Scenarios: **2049CONS_T** • Period: **12** 7. In **MIN** report, each line by line entity with minorities (NCI) is indicated in a separate sheet. In each sheet the following details are visible: • entity equity ratio% (cell F1) • In column C, the value (Trial Balance + Entity journals) of Net equity uploaded in CCH Tagetik • In columns D and E, the expected values for Group and for Minorities (manually calculated by the Customer) • In column F, the values calculated by CCH Tagetik in the MIN journal • In column G a check between the expected (from the customer) values and the calculated (by CCH

Tagetik) values

8. Source data ($AMOUNT and entity journals) are correctly uploaded.
9. Assumption:
    - the uploaded input data are correct and consequently also the BS Year Result
    - The equity ratio % in the Consolidation scenario is correct for all entities
10. Find the entity and the reason of the wrong/missing calculation in the application. Correct the mistake.

Need any help? Here are some hints

- Run the report MIN and check sheet by sheet. You can see the column “Check” is valorized only for entity A03
- Do a Drill down by Header on column C in the cell of interest
- ATTENTION! The following suggestions provide you the result.
- Adapt Minority rules (e.g.category node MINORITIES) and run Consolidation data processing.
- Refresh the MIN report. Minorities on A03 are now fine (no difference in Check column).

EXERCISE 5 - Most Common events 1 - Additional automatic effects

Objective	Evaluate a proposed event (Ownership structure register management) and analyze its effects.
Ownership Structure register – Standard goodwill	1. Go to the application, log in using • User: XAVIER2 • Password: X 2. The elimination journal is created starting from the Ownership structure register. Go to the User homepage and click on the tile Ownership structure register selecting: • Process: CONS2050_T 3. Filter for: • Owner entity: A00 • Owned entity: A08 The system shows you the Event number=10 4. Please note the information inserted on the header: • Owner and Owned entity codes and currencies • the direct ownership % • the Event date: 1/1/2050 (the Acquisition is in 2050) • the Event Type: Initial Consolidation – No FG (to calculate the possible Standard Goodwill) 5. Go to Actions and click on Event data 6. Go to the tab Financial Investments tab and note that the Financial Investments variation account is 450,000 EUR 7. Go to the tab Net Equity and note: • Share capital: -300,000 EUR • Other reserves: -250,000 EUR

Financial Investments Elimination Journals – Standard goodwill

1. Go to the **User Homepage**, click on tile **System Reports**, and then **Journals/ Consolidation journals – Headers**.
2. Select the following parameters:
   - Scenario = 2050ACT_T
   - Period = 03
   - Entity 1= A00
   - Entity 2 = A08
   - Category = FI
3. Click **Original and consolidated rows** from the **Actions** button
4. Analyze the Elimination journal on Original Amount type:
   - Automatic (Standard) Goodwill is generated on account **10060-320** and is equal to **10,000** (as the difference between FI elimination and Net equity elimination)
   - The account to use for Goodwill is the one set in IFRS3 tab
   - Application highlights the calculation and the event in the **Notes** column: "Goodwill Event 10"

   Close the windows.

Ownership Structure register – Full goodwill

1. Go back to the **User homepage** and click the tile Ownership structure register selecting:
   - Process: CONS2050_T
2. Filter for:
   - Owner entity: A00
   - Owned entity: A08

   The system shows you the Event number 10
3. On Event 10, change the information inserted on the header:

- the Event Type: **Initial Consolidation – with control – Full goodwill** (to calculate the possible Full Goodwill)
- Advanced – Events / For control acquisition / **Owned entity fair value (in credit)**: **-800,000**

4. Click on the **Save** button
5. Which accounts does the system read? Go to the **Admin Homepage**, Data Processing/ Basic Consolidation/ IC matching logic and IC eliminations/ List/ Financial investments elimination rules in Ownership structure register/ tab **IFSR3**. In this tab, there are the accounts used by the system for specific calculations.
6. Insert in tab IFRS3:
   - Group full goodwill account: **10070**
   - Minorities full goodwill account: **10080**
   - Positive consolidation differences account (credit): **20340-060**
   - Negative consolidation differences account (debit): **20340-060**

   These last two accounts are used in a few events to balance the journal due to full goodwill recalculation.

   Save.
7. Go to the **User Homepage**, and click on the tile **2050ACT_T - Consolidator Cockpit**.
   - Select all the nodes
   - Click on Consolidation data processing/ Custom
   - Select all the listed Consolidation scenarios/periods
8. Click on the Run button

Financial Investments	1. Check the impact of the Full Goodwill event type.

Elimination Journals – Full goodwill

2. Go to the **User Homepage**, click on tile **System Reports**, and then **Journals/ Consolidation journals – Headers.**
3. Select the following parameters:
    - Scenario : 2050ACT_T
    - Period: 03
    - Entity 1: A00
    - Entity 2: A08
    - Category: FI
4. Click on **Original and consolidated rows** from the **Actions** button.
5. Analyze the Elimination journal on **Original Amount type**:
    - Group Full Goodwill is generated on account **10070-320** and is equal to **200,000**= *-(-800,000-(-550,000))*0.8*
    - **Minorities Full Goodwill** is generated on account **10080-320** and is equal to **50,000** = *-(-800,000-(-550,000))*0.2*
    - Goodwill account **10060** and Minority reserve account **20360** are used as **counterparty accounts**
    - Application highlights the calculation and the involved event in the **Notes** column: “Full Goodwill Event 10”
6. Close all the open tabs/windows.

EXERCISE 6 - Most Common Events 2 - Entity's life analysis

Objective	Evaluate the proposed events and analyze their effects.
Settings	1. Analyze the story of entity A04 in the Group. 2. Please have a look at the Summary slide 7. a.
Ownership Structure register	1. Go to the application, log in using • User: XAVIER2 • Password: X 2. Go to the **User homepage** and click on the tile Ownership structure register selecting: • Process: CONS2050_T 3. Filter for: • Owner entity: A00 (a single owner) • Owned entity: A04 The system shows you three Events, 10, 20, and 30. 4. Please note the information inserted on the header (we are in March 2050): • Event 10: • 80% of the entity is bought in 2049 • Event type: Initial consolidation – NO FG • Event 20: • the entity has a share capital increase in 2050 • Event type: Capital increase • Event 30: • An additional 20% of the entity is bought in 2050 • Event type: Step up consolidation - NO FG

5. Please note the information about **Financial Investment** (always variation account):
    - Event 10:
        - Carrying amount of 450,000 for 80% of the entity
    - Event 20:
        - Carrying amount increase of 20,000 for share capital increase
    - Event 30:
        - Carrying amount increase of 115,000 for an additional acquisition of 20% of the entity
6. Please note the information about **Net equity** (normal or variation accounts): ·
    - Event 10: we insert **normal** accounts
    - Event 20: we insert a **variation** account
    - Event 30: we insert **normal** accounts

Please have a look at the Summary slide 7.b

Financial Investments Elimination Journals

1. Go to the **User Homepage**, click on tile **System Reports,** and then Journals/ Consolidation journals – Headers.
2. Select the following parameters:
    - Scenario = 2050ACT_T
    - Period = 03
    - Entity 1= A00
    - Entity 2 = A04
    - Category = FI
3. Click on **Original and consolidated rows** from the **Actions** button.
4. Analyze the Elimination journal on **Original Amount type**.
5. How does the system eliminate the values?

    Regarding **Financial investment**:
    - for each event the system eliminates the variation carrying amount

inserted

Regarding the **Net Equity**:

- **Event 10**: as we insert **normal** accounts, the system eliminates 80%-0%=80% (**delta**) so the total net equity eliminated is 440,000:
  - Share Capital: 240.000
  - Other Reserves: 200.000
- **Event 20**: as we insert a **variation** account, the system eliminates 80% (**current ownership %**) so the Share Capital eliminated is 20,000
- **Event 30**: as we insert **normal** accounts, the system eliminates 100%-80%=**20%** (**delta**) so the total net equity eliminated is 115,000:
  - Share Capital: 65.000
  - Other Reserves: 50.000

Please have a look at the Summary slide 7.c

6. Which variation accounts are used?

   The system valorizes the Net equity variations based on the **variation control group** settings or on the variation account used in the event.

   Please have a look at the Summary slide 7.d

7. Is the Standard goodwill created?

   Yes, we have Standard Goodwill created in 2049 from the Acquisition (Event 10).

8. Additional info: In the journal, the application highlights the event of the year generating a specific row in the column *Ownership structure register event* (e.g. 20 or 30).

EXERCISE 7 - Most Common events 3 - Deconsolidation – out of the group

Objective	Evaluate a proposed event (both settings and Ownership structure register management) and analyze its effects.

Settings

1. Analyse the story of entity A09 (exit from the Group).
2. Go to the application, log in using:
   - User: XAVIER2
   - Password: X
3. In 2049, entity A00 bought entity A09. In 2050, entity A00 sells entity A09 to third parties so it's out of the group.
4. Go to **User Homepage** and click the **Ownership structure register** tile. Select:
   - Process: CONS2050_T
5. Filter for:
   - Owner entity: A00
   - Owned entity: A09
6. Add a new event:
   - Event number: 20
   - Event Date: 3/30/2050
   - Event type: Deconsolidation – No FG
   - Owner entity: A00
   - Owned entity: A09
   - Owner entity currency: EUR
   - Owned entity currency: EUR
   - Direct ownership %: 0

   Save.
7. Select the new event and go to **Actions** / **Event Data**
8. In the **Financial Investments** tab, add a new line:
   - Category: $AMOUNT

- Account: 10040-390
- Cost Centers: GEN_CC
- Products: GEN_P
- Amount: - 450,000 (decrease)

9. In the **Net Equity** tab, add two new lines, one for Share Capital and another one for Other reserves. We want a balance F.I. elimination journal also on original scenario.
10. For Share capital:
    - Category: $AMOUNT
    - Account: 20310
    - Cost Centers: GEN_CC
    - Products: GEN_P
    - Amount: -300,000
11. For Other reserves:
    - Category: $AMOUNT
    - Account: 20320
    - Cost Centers: GEN_CC
    - Products: GEN_P
    - Amount: -250,000
12. Go to Admin homepage/ Process/ CONS2050_T then Actions and **Process definition**.
13. To set **Deconsolidation** on the **original** scenario, go to Data Entry and Submission Rules/ **Override Entity parameters on original scenarios**, click on the pen icon (override rules) and add a line (please leave blank the not mentioned fields):
    - Original scenarios/periods: Selected
    - Scenario/period: 2050ACT_T 03
    - Entities: A09
    - Deconsolidate method: **Deconsolidate from**

current period

Save and close the mask.

14. To set **Deconsolidation** on **Original** and **Consolidation** scenario, go to Data processing/ Consolidation/ Basic Consolidation and check that **Deconsolidation data processings are** already **enabled.**
15. Go back to Consolidation menu and click **Requirements** icon/ Consolidation Areas. Select 2050CONS_T period 03 and click the icon **Define elements to consolidate**. Add a line:
    - Action: Include
    - Entities: A09
    - Consolidation method: Line by Line
    - Deconsolidation method: **Deconsolidate from current period**
    - Consolidation % type – Proportional: None

    Save and Close the mask.
16. Go to the **User Homepage**, and click the tile 2050ACT_T - Consolidator Cockpit:
    - Select all the nodes
    - Click on Consolidation data processing/ Custom
    - Select all the listed Consolidation scenarios/periods
17. Click on the Run button

Checks

1. Check the impact of deconsolidation data processing e.g. by Amounts windows (User homepage / System reports /Gross and IC amounts) on BS and P&L of entity A09.
2. To check the impact of deconsolidation on entity A09, run the report **DECO** in the folder OUT/ME. Select:
    - Consolidation scenario: 2050CONS_T

- Period: 03
- Entities: A09
- Amount type: TIP_CV

In this report, three sheets are visible.

In the first two, it's shown the Balance Sheet (BS tab) and the P&L (PL tab) for the selected entity, split by category.

In the other one , variation control groups are analyzed to show that the system uses the account *Area variation - exit* to reverse the values of entity to be deconsolidated.

EXERCISE 8 - Consolidation scenario vs Segment Reporting

Objective	Analyze the customer requirements to decide if Segment Reporting can be used to examine the Subgroup results. Learn how to create a report using Segment Reporting.
Segment Reporting for Subgroups view	1. Open the **Consolidation Pro Exercises** folder 2. Inside it, you find the excel file **4_Subgroups_Conso_vs_Segment_EX_8** 3. The customer requires two Subgroups, Subgroup 1 and Subgroup 2. 4. **In this case, is it possible to use Segment Reporting to cover the request? Why?** 5. Open the excel file and read the Instructions. Analyze the provided requirements and evaluate.The sheet **Check** contains a list of topics to be taken into considerations to do the evaluations. **Need any help? Here are some hints** • It's possible to use Segment Reporting in this case as: • All accounts (also converted at historical FX rate) are analyzed but we have the same consolidation currency for Group and Subgroups; no difference in the used historical FX rates between Subgroups and Group • In the Subgroups and in the Group we have the same minorities, the same consolidation method, the same categories and the same entities • NER is not used and it's not necessary to save and transfer the Subgroups figures
Create a report	1. Create now the report accordingly to the customer draft. Open the excel file **4_Subgroups_Conso_vs_Segment_EX_8** and go to the sheet **Report draft**

2. Go to Excel and log in into CCH Tagetik Excel NET client:
    - user: XAVIER
    - password: X
3. Click on Design mode button and select the report SEGM_T (folder OUT/SEGM)
4. The report is a draft to be completed. There are 2 sheets: one for Balance Sheet (BS) and another one for Profit & Loss (PL).The FSTs are already inserted in the matrix.
5. It's necessary to set:
    - the Segment options (when necessary) on the matrix columns using the proper dimension
    - the Amount type
6. Group Consolidation scenario code is 2049SEGM_ CONS and we are analyzing the period 12 (December). The scenario has already been created and the consolidated values are available.
7. Make a comparison between Total column (formula) in the report and the values coming from Group Consolidation scenario.
8. Additionally, again to check the values obtained by Segment options, you can add some comparison columns with Consolidation scenarios for Subgroup 1 and Subgroup 2. The related Consolidation scenarios (already created and set in the system) are:
    - 2049SEGM_SUB1
    - 2049SEGM_SUB2

Need any help? Here are some hints

- Add Amount type=TIP_CV
- Open the matrix in BS sheet and insert on the columns the following nodes from the hierarchy 02 -

Actual view - Organizational (root X00):

- A (Per Segment) for Subgroup 1
- B (Per Segment) for Subgroup 2
- X00 (Intersegment)

- Add then a column as sum of previous columns (Total)
- Do the same for PL sheet
- Additionally:
  - Fix the Consolidation scenarios for Group, Subgroups 1 and 2 to compare the values of these 3 columns

    (Alternatively you can use the $ - All scenarios parameters: GROUP, SUB1, SUB2)
  - Add some Check columns to compare the values:
    - Total - 2049SEGM_CONS (should be = 0)
    - node A (Per Segment) - 2049SEGM_SUB1 (should be = 0)
    - node B (Per Segment) - 2049SEGM_SUB2 (should be = 0)

Need some help?

Here you can find the solutions to the most frequent

technical issues you may get stuck with during the course.

I can't login to the training environment

Make sure you are using the access link provided by the trainer (with the proper 4 digits token if needed!). Events have a starting and ending date/time.

Make sure you are not trying to access the training course too early or too late!

My machine is slow

- Keep in mind that lab configuration may require up to 20 minutes to start from the moment you click on the CCH Tagetik Chrome icon! 

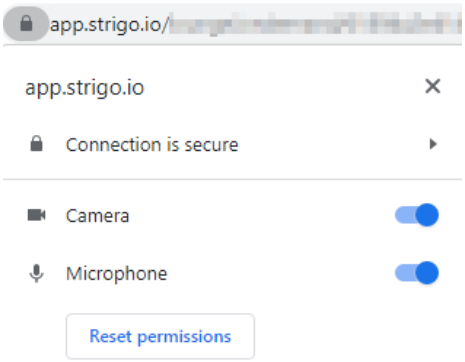

- The local connection's bandwidth is not sufficient for the number of connections currently in place (performance issues on the server side are very rare).

  Solution: ask the IT services to reboot the access point and prefer connection via cable if available.

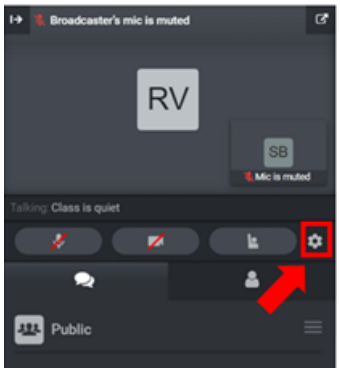

Audio/Video Troubleshooting

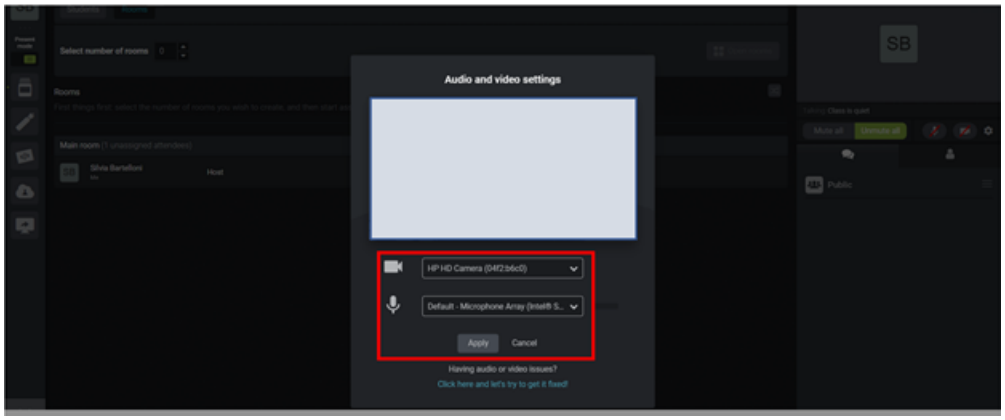

In case you are having problems with audio and video try the following:

1. Make sure you are running a compatible browser (Google Chrome, Mozilla Firefox).
2. Make sure your media devices are connected and are not muted or set to very low volume.
3. Make sure the browser you are in is allowed to use your laptop audio and video

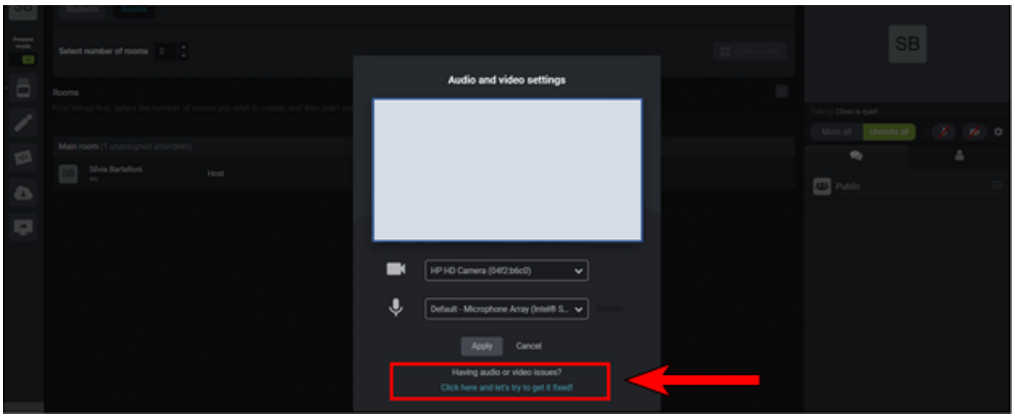

4. Make sure no other applications are running that use your media devices (microphone, camera or speakers).
5. Prevent any ad-blockers or script blockers running on the classroom's tab.
6. Refresh the page.
7. From the right communication panel, click on the settings icon and change the camera/video options selected

Check if there are any errors: if so, they will appear in red.

In addition, you can run a troubleshoot by clicking on: "Let's try and get it fixed" and then on "Run Troubleshoot"

If you still have problems, it could depend on network restrictions.

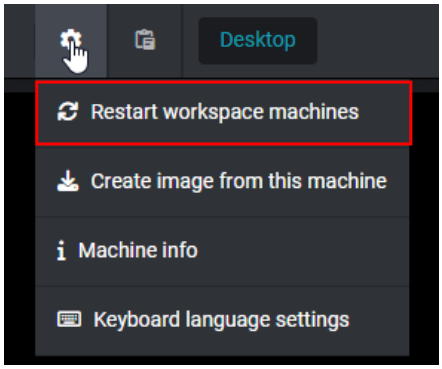

Resolution issues: if you see CCH Tagetik application masks too big in the machine even if I didn't change browser zoom.
Remember, Strigo adapts the machine to your computer resolution. Try to change your resolution or use a different monitor!

⚠ Important: Scaling setting recommended = 100% (max 125%).

Lab troubleshooting while practicing

If you are in your Virtual Machine and you are experiencing a black screen with your lab not starting:

1. Try restarting the machine by clicking on the wheel icon and then on "Restart workspace machine"

2. Try logging out and then log in again after few minutes

⚠ Important:

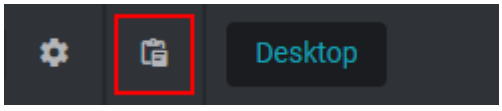

Your machine will be rebooted, but do not panic! No data will be lost. You will need to wait for the OS to restart and CCH® Tagetik to be reloaded though.

3. A pause > restart of the lab should work as well. The pause option is on the top right-hand corner of the screen. The workspace will switch to **Paused** mode, and then you want to really just give it around two minutes. This is usually enough time to let the lab machine be actually stopped, before you go and hit **Resume** again.
4. Try to open the browser in incognito/private mode.
5. Reach out to Strigo support through this link and then click start live chat

I can't copy/paste any content to the virtual machine

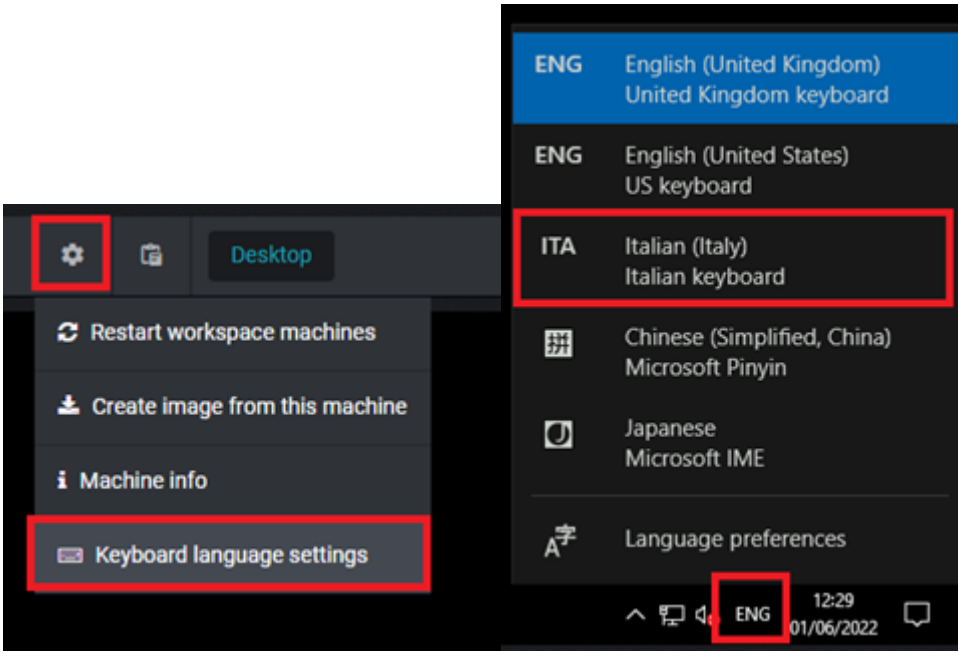

Direct copy/paste is not allowed.

Solution: Use the clipboard icon to copy and paste from the desktop to the virtual machine and viceversa.

I cannot change language in my machine

Solution: Change the language both by desktop bar and by Settings.

MS Excel: I can't select a given form or an object of a form.

This issue happens pretty often and is due to some wizard (e.g. Matrix Wizard, Cell Fields wizard) already open but not currently diplayed on the screen. **When any wizard is open and running, you can't work anywhere else**.

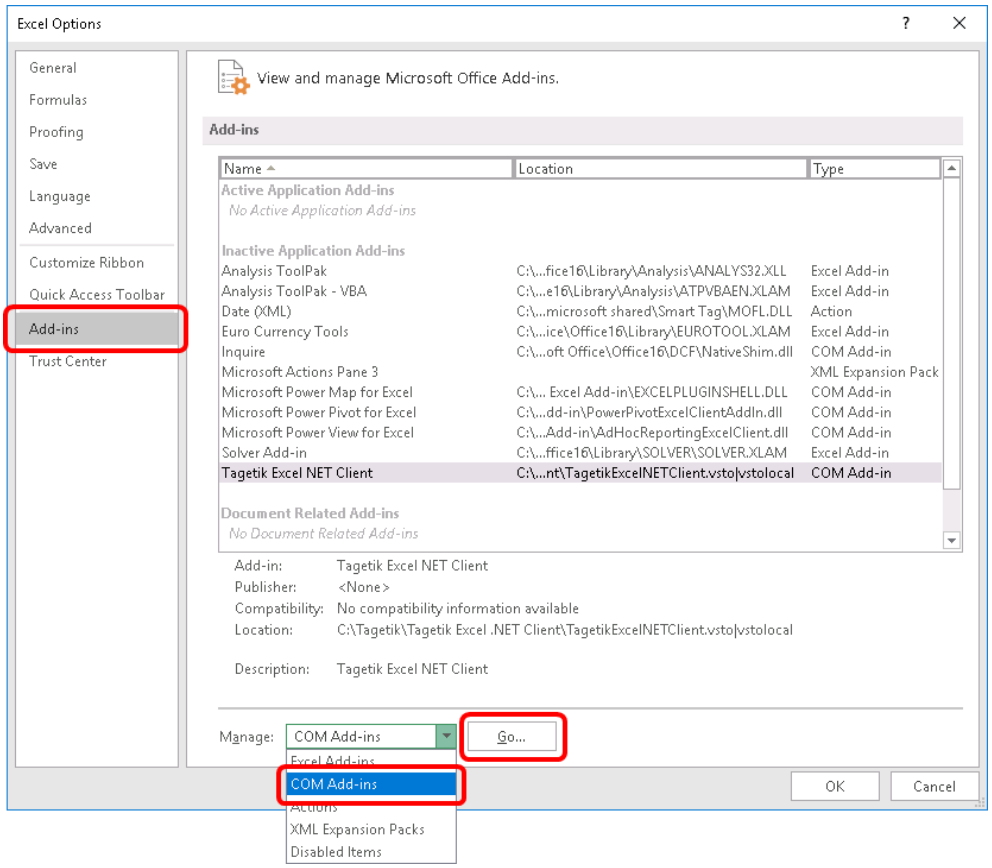

Solution: check if you have any of the wizard open and running (most common: Matrix Wizard, Tab Filters, Form Filters, Cell Fields wizards). If this is the case, be sure to have finished your work on that wizard and close it with OK to confirm. Then go on with your work.

MS Excel: the Tagetik menu is no longer available on the ribbon bar.

Solution1: this probably means the CCH Tagetik add-in has been disabled by MS Excel due to a crash or some errors and has to be enabled again.

Follow the path **File > Options**. Click "**Add-Ins**" on the "**Excel Options**" pane and expand the drop-down menu "**Manage**" on the bottom. Try to select:

1. "**COM Add-Ins**" > "**Go...**". If unticked, tick the "**Tagetik Excel NET Client**" Add-in and click OK
2. "**Disabled items**" > "**Go...**". If you find there the "**Tagetik Excel NET Client**" Add-in, enable it. Close and start Excel.

Solution2: should solution1 not solve the issue, disinstall and reinstall the CCH® Tagetik add-in. Ask the trainer for some help in case.

If you use a 4K resolution monitor, there's a chance you will see far too little

Solution: Low the resolution before the training, then set it back to the original value after the training

My problem is not listed here.

If even this can't solve your problem, please refer to your trainer (and if you are a trainer to your training manager).
